Thank you for purchasing a **SMITHCO** product.

Read this manual and all other manuals pertaining to the Spray Star 1000 carefully as they have safety, operating, assembly and maintenance instructions. Failure to do so could result in personal injury or equipment damage.

Keep manuals in a safe place after operator and maintenance personnel have read them. Right and left sides are from the operator's seat, facing forward.

All **SMITHCO** machines have a Serial Number and Model Number. Both numbers are needed when ordering parts. The serial number plate on the Spray Star 1000 is located on the right main frame, in front of the oil tank. Refer to engine manual for placement of engine serial number.

| For easy access rec | ord your Serial | and Model r | numbers here. |

| MODEL NO. | | kg/lb | |
| | | | |
| | | | |

Information needed when ordering replacement parts:

- 1. Model Number of machine
- 2. Serial Number of machine
- 3. Name and Part Number of part
- 4. Quantity of parts

SAFE PRACTICES

- 1. It is your responsibility to read this manual and all publications associated with this machine.
- 2. Never allow anyone to operate or service the machine or its optional equipment without proper training and instructions. Never allow minors to operate any equipment.
- 3. Learn the proper use of the machine, the location and purpose of all the controls and gauges before you operate the equipment. Working with unfamiliar equipment can lead to accidents.
- 4. Wear all the necessary protective clothing and personal safety devises to protect your head, eyes, ears, hands and feet. Operate the machine only in daylight or in good artificial light.
- 5. Inspect the area where the equipment will be used. Pick up all debris you can find before operating. Beware of overhead obstructions and underground obstacles. Stay alert for hidden hazards.
- 6. Never operate equipment that is not in perfect working order or without decals, guards, shields, or other protective devices in place.
- 7. Never disconnect or bypass any switch.
- 8. Carbon monoxide in the exhaust fumes can be fatal when inhaled, never operate a machine without proper ventilation.
- 9. Fuel is highly flammable, handle with care.
- 10. Keep engine clean. Allow the engine to cool before storing and always remove the ignition key.
- 11. Disengage all drives and set park brake before starting the engine.
- 12. Never use your hands to search for oil leaks. Hydraulic fluid under pressure can penetrate the skin and cause serious injury.
- 13. This machine demands your attention. To prevent loss of control or tipping of the vehicle:
 - A. Use extra caution in backing up the vehicle. Ensure area is clear.
 - B. Do not stop or start suddenly on any slope.
 - C. Reduce speed on slopes and in sharp turns. Use caution when changing directions on slopes.
 - D. Stay alert for holes in the terrain and other hidden hazards.
- 14. Before leaving operator's position:
 - A. Disengage all drives.
 - B. Set park brake.
 - C. Shut engine off and remove the ignition key.
 - D. If engine has to run to perform any maintenance keep hands, feet, clothing and all other parts of body away from moving parts.
- 15. Keep hands, feet and clothing away from moving parts. Wait for all movement to stop before you clean, adjust or service the machine.
- 16. Keep the area of operation clear of all bystanders.
- 17. Never carry passengers.
- 18. Stop engine before making repairs/adjustments or checking/adding oil to the crankcase.
- 19. Use parts and materials supplied by **SMITHCO** only. Do not modify any function or part.
- 20. Use caution when booms are down as they extend out beyond the center line of the machine.
- 21. The tank is a confined space, take precaution.

This machine is intended for turf maintenance. Other use is forbidden.

MAINTENANCE

Before servicing or making adjustments to machine, stop engine and remove key from ignition.

Use all procedures and parts prescribed by the manufacturer's. Read the engine manual before operation.

The suggested maintenance checklist is not offered as a replacement for the manufacturer's but as a supplement. You must adhere to guidelines established by manufacturer for warranty coverage. In adverse conditions such as dirt, mud or extreme temperatures, maintenance should be more frequent.

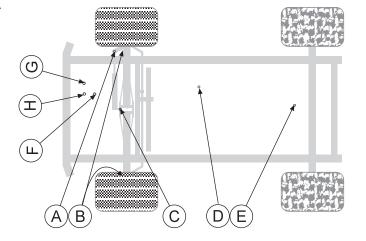

DAILY CHECKLIST

- 1. Check the engine oil level. Add as needed. **DO NOT OVERFILL**. Refer to engine owner's manual for oil grade and procedure.
- 2. Tire pressure should be 20 psi (1.4 bar) maximum in the rear tires; 22 psi (1.5 bar) maximum in the front tires.
- 3. Inspect the electrical system and battery cables for loose connections or frayed wiring. Replace any faulty equipment or tighten if loose.
- 4. Check hardware for loose or missing nuts, bolts, screws, etc., and tighten or replace as needed.
- 5. Inspect hydraulic lines for damage or leaks. Never use hands to inspect for leaks.
- Check the hydraulic fluid level. The hydraulic fluid tank is located on the left side of the machine. The fluid level should be 2"-2½" (5 - 6.4 cm) from the top of the fill tube when cold. Use only SAE 10W-40 API Service SG Motor Oil.
- 7. Inspect the steering, throttle and shift linkages for good hookups and clear travel.
- 8. Check controls for smooth, proper working operation. Lubricate as needed.
- 9. Check park brake adjustments. Adjust as required.
- 10. Check anti-vibration mounts on engine frame.

LUBRICATION

Use No. 2 General purpose lithium base grease and lubricate every 100 hours. The Spray Star 1000 has 9 grease fittings.

- A. One on the rod end of hydraulic cylinder.
- B. One on each the right and left spindles.
- C. One on the center front pivot.
- D. One on the pump pivot.
- E. One on the brake relay.
- F. One on the pedal relay.
- G. One on the reverse pedal.
- H. One on the forward pedal.

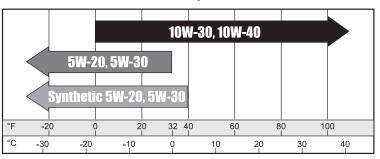

EELCTRICAL CONNECTIONS Use dielectric grease on all electrical connections.

AIR CLEANER

- 1. Loosen cover retaining knob and remove cover.
- 2. Remove pre-cleaner from paper element.
- 3. Check paper element. Replace element as necessary.
- 4. Wash pre-cleaner in warm water with detergent. Rinse pre-cleaner thoroughly until all traces of detergent are eliminated. Squeeze out excess water (do not wring). Allow pre-cleaner to air dry.
- 5. Saturate pre-cleaner with new engine oil. Squeeze out all excess oil.
- 6. Reinstall pre-cleaner over paper element.
- 7. Reinstall air cleaner cover. Secure cover with cover retaining knob.

ENGINE OIL

Change and add oil according to chart below based on air temperature at the time of operation. Do not overfill. Use a high quality detergent oil classified "For Service SF, SG, SH" oil. Use no special additives with recommended oils. Do not mix oil with gasoline.

SAE Viscosity Grades

Starting Temperature Range Anticipated Before Next Oil Change

HYDRAULIC OIL

- 1. Use SAE 10W-40 API Service SG motor oil.
- 2. For proper warranty, change oil every 500 hours or annually, which ever is first.
- 3. Oil level should be 2-21/2" (5-6.4cm) from top of the fill tube when fluid is cold. Do not overfill.
- 4. After changing oil, run the machine for a few minutes. Check oil level and for leaks.
- Always use extreme caution when filling hydraulic oil tank or checking level to keep system free of contaminants. Check and service more frequently when operating in extremely cold, hot or dusty conditions.
- 6. If the natural color of the fluid has become black or smells burnt, it is possible that an overheating problem exists.
- 7. If fluid becomes milky, water contamination may be a problem.
- 8. If either of the above conditions happen, change oil immediately after fluid is cool and find the cause. Take fluid level readings when the system is cold.
- In extreme temperatures you can use straight weight oil. We recommend SAE 30W API Service SG when hot (above 90°F (33°C)) and SAE 10W API Service SG when cold (below 32°F (0°C) ambient temperature. Use either motor oil or hydraulic oil, but do not mix.
- 10. Oil being added to the system must be the same as what is already in the tank. Mark the tank fill area as to which type you put in.

DIRECTO VALVES

Directo Valves should be disassembled, cleaned, inspected, and a service kit installed annually. More often depending on the chemicals being used and the frequency of use. In most cases this can be done without removing the valve from the sprayer.

MAINTENANCE

TIRE PRESSURE

Caution must be used when inflating a low tire to recommended pressure. Over inflating can cause tires to explode. Front tires should be 20 psi (1.4bar) and rear tires should be 22 psi (1.5bar). Improper inflation will reduce tire life considerably.

WHEEL MOUNTING PROCEDURE

- 1. Set park brake. Turn machine off and remove key.
- 2. Block wheel on opposite corner.
- 3. Loosen nuts slightly on wheel to be removed.
- 4. Jack up machine being careful not to damage underside of machine.
- 5. Place wheel on hub lining up bolt holes.
- 6. Torque to 64-74 ft/lb (87-100Nm) using a cross pattern. Retorque after first 10 hours and every 200 hours thereafter.
- 7. Lower machine to ground and remove blocks and jack.

BATTERY

Batteries normally produce explosive gases which can cause personal injury. Do not allow flames, sparks or any ignited object to come near the battery. When charging or working near battery, always shield your eyes and always provide proper ventilation.

Battery cable should be disconnected before using "Fast Charge".

Charge battery at 15 amps for 10 minutes or 7 amps for 30 minutes. Do not exceed the recommended charging rate. If electrolyte starts boiling over, decrease charging.

Always remove grounded (-) battery clamp first and replace it last. Avoid hazards by:

- 1. Filling batteries in well-ventilated areas.
- 2. Wear eye protection and rubber gloves.
- 3. Avoid breathing fumes when electrolyte is added.
- 4. Avoid spilling or dripping electrolyte.

Battery Electrolyte is an acidic solution and should be handled with care. If electrolyte is splashed on any part of your body, flush all contact areas immediately with liberal amounts of water. Get medical attention immediately.

Use of booster battery and jumper cables. Particular care should be used when connecting a booster battery. Use proper polarity in order to prevent sparks.

TO JUMP START (NEGATIVE GROUNDED BATTERY):

- 1. Shield eyes.
- Connect ends of one cable to positive (+) terminals of each battery, first (A) then (B).
- Engine D C Booster Battery Jumper Cable #2 + -Jumper Cable #1 B
- 3. Connect one end of other cable to negative (-) terminal of "good" battery (C).
- 4. Connect other end of cable (D) to engine block on unit being started (NOT to negative (-) terminal of battery)

To prevent damage to other electrical components on unit being started, make certain that engine is at idle speed before disconnecting jumper cables.

Before servicing or making adjustments to the machine, stop engine, set park break, block wheels and remove key from ignition.

NOTE:

Follow all procedures and ONLY use parts prescribed by the manufacturer. Read the engine manual before maintenance.

Change Oil and Filter after first 5 hours.

‡ Clean more often under dusty conditions or when airborne debris is present , replace air cleaner parts, if very dirty.

WHEEL CREEP

"Creep" is when the engine is running and hydrostatic transmission is in neutral, but due to inadequate alignment, wheels still move. Do the following procedure to stop this motion.

- 1. Lift up and support machine so rear wheels are off the ground and can turn freely.
- In the engine compartment, the hydrostatic transmission is on the left side. The swash plate(D) is under the transmission and comes out forward. The idler arm(B) has a bearing that runs in the notch of the swash plate. Loosen bolt (A).
- 3. With engine running, move bearing(B) so it centers on the swash plate(D) and 'wheel creep' stops.
- 4. Tighten all fasteners and test by using foot pedal linkage to see that 'creep' is removed.
- 5. Turn engine off and lower machine.

SPRAY PUMP WITH ELECTRIC CLUTCH BELT

Located to the rear and right of the engine. Should have approximately 1/2" (13mm) of deflection in the center of the top strand. Loosen and tighten the 5/16 -18 x $1^{1}/4$ set screw located on the foot of the pump mount.

PARK BRAKE

Turn knob clockwise on end of park brake to tighten. Turn it counter clockwise to loosen. If finer adjustment is needed turn clevis on brake cable to adjust length of cable.

SPEED CALIBRATION NUMBERS

The speed calibration numbers for the Spray Star 1006 is 120.

The speed calibration numbers for Spray Star 1008 is 612.

STORAGE

If the engine will be out of service for two or more months, use the following storage procedure.

- 1. Clean the exterior surfaces of the engine.
- 2. Change the oil and filter while the engine is still warm from operation.
- 3. The fuel system must be completely emptied, or the gasoline must be treated with a stabilizer to prevent deterioration.

If you choose to use a stabilizer, follow manufacturers recommendations, and add the correct amount for the capacity of fuel system. Fill fuel tank with clean, fresh gasoline. Run engine for 2-3 minutes to get stabilized fuel into carburetor. Close fuel shut-off valve when unit is being stored or transported.

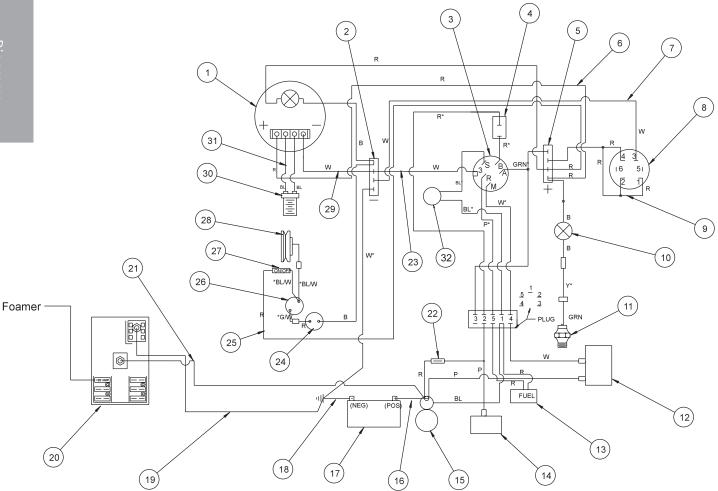

To empty the system, drain fuel tank and carburetor, or run engine until tank and system are empty.

- 4. Remove the spark plugs. Add one tablespoon of engine oil into each spark plug hole. Install plugs, but do not connect the plug leads. Crank the engine two or three revolutions.
- 5. Store machine in a clean, dry place.

| 9* | 16-524-03 | Valve Body Mod. | 1 |
| * | 16-524-05 | 1" Valve ISO-Body Kit | |

WHEN SERVICING VALVE:

Replace valve body with iso-body kit (16-524-05) if valve has been leaking internally.

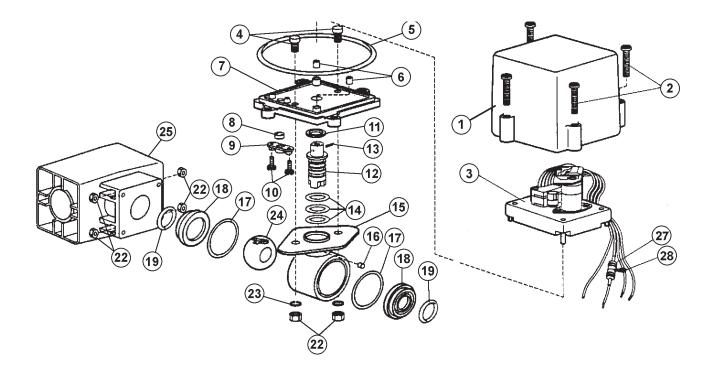

Replace motor assembly if the motor will not run or if the printed circuit board is corroded.

Before reassembling valve, remove the coupler shaft from the valve body. Apply Loctite to coupler shaft and woodruff key. Place the coupler shaft (Ref# 7) and the woodruff key (Ref# 5) onto the motor shaft. Plug motor into the valve connector coming from Sprayer Control Console. Check that the motor rotates in both directions. Motor must stop when coupler cam releases printed circuit board switch button.

When reassembling valve, grease both sealing surfaces of coupler shaft. Insert coupler shaft into Iso-flange and be sure seal properly seats on shaft. Install on valve body and apply RTV 738 to mounting holes. Reassemble remaining items as shown in parts diagram on opposite side.

| 41 | 10-246 | Left Boom Stabilizer | 1 |

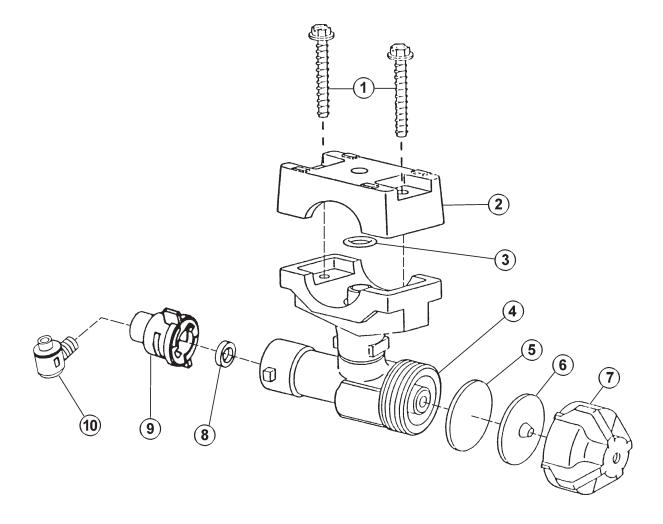

INSTALLATION INSTRUCTIONS

For best result use plumber's tape on all fittings.

- 1. The three boom assemblies are not on the packing list but are in the carton. The long boom assemblies are the right and left booms. The labels are located on the pivot brackets (Ref# 24). The small boom assembly is the center boom. You can NOT order these boom assemblies as one unit. Please refer to parts drawing for individual parts.
- Mount small boom assembly to the boom carriers on sprayer using four boom brackets (Ref# 8), four bolts, ³/₈ 16 x 5¹/₂ and four lock nuts, ³/₈ 16 (Ref# 7). One boom bracket should go on boom assembly and one on boom carrier. Do the same for right and left side. Place boom at desired level (approximately 20" (51cm) nozzle height) and center. Tighten bolts.
- Take right boom and slide pivot bracket (Ref# 13) in center mount (Ref# 24) and hold in place with ¹/₂ 13 x 5¹/₂ bolt and ¹/₂ 13 center lock nut (Ref# 32). Do not over tighten, boom must be able to move up and down.
- 4. Install boom lifts (Ref# 31) using clevis pin and cotter pin (Ref# 27) so the slotted end hooks to the pivot bracket (Ref# 24) and the bushing end hooks to the actuator bracket (Ref# 20 & 22).
- Hook hoses to respective fittings using hose clamps (18-040). The hose coming from right side of sprayer goes to straight fitting on right boom. Center hose from sprayer goes to straight fitting on center boom. The left hose from sprayer goes to straight fitting on left boom. Be sure all clamps are tight.
- 6. Use the adjustment slots on the boom lifts to completely lift and lower booms.
- 7. Using set screws (Ref# 9) adjust actuator brackets so nozzles of booms are at same height with nozzles of center section. Tighten bolts holding actuator brackets to center mount and locknuts on set screws.
- 8. Rubber boom carrier and latch are located on the horizontal boom support on top of tank.

NOZZLE ASSEMBLY DRAWING

NOZZLE ASSEMBLY PARTS LIST

| REF# | PART# | DESCRIPTION | QUANTITY |
|------|-----------|----------------------------------|----------|
| 1* | 16-920-01 | Screw | 2 |
| 2* | 16-920-02 | Upper Clamp | 1 |
| 3* | 16-920-03 | O-Ring | 1 |
| 4* | 16-920-04 | Body with Lower Clamp | 1 |
| 5* | 16-920-05 | Diaphragm Teflon (Optional) | 1 |
| 6* | 16-920-06 | Diaphragm EPDM Rubber (Standard) | 1 |
| * | 16-920-07 | Diaphragm Viton (Optional) | 1 |
| 7* | 16-798 | Chemsaver End Cap | 1 |
| 8 | 16-800 | Gasket Viton | 1 |
| 9 | 16-921 | Сар | 1 |
| 10 | 16-805 | Raindrop Tip 1/4 RA8 | 1 |
| * | 16-920 | Body | 1 |

NOTE: When the 16-920-05 Teflon Diaphragm is used, it is placed in the assembly in front of the 16-920-06 EPDM Rubber Diaphragm. Nozzles are located 20" (51cm) apart on the right, left, and center tubes (16-927 and 16-928). There are pre-drilled holes in all tubes. The Nozzle should be at a 45° angle to the ground for proper application.

RA RAINDROP ® TIPS

This is a wide-angle (120°), hollow-cone, drift-reduction nozzle. Replaces conventional flooding nozzles in broad-cast applications.

FEATURES:

- Color-coding makes it easy to match nozzle flow rates for easy identification.
- Color-coding is available in sizes 1/4 RA2 1/4 RA15.
- Uniform spray distribution.
- A large orifice opening and passages minimize clogging.
- The Raindrop nozzle's patented design element, a secondary swirl chamber in the nozzle cap, alters the swirling action of the liquid so that the fewer driftable lines are discharged from the secondary orifice.
- Maximum recommended pressure for Nylon is 100 psi (70bar).
- Maximum recommended temperature is 120°F (50°C).

NOZZLE TILT

Delavan's extensive research on spray patterns has proven that a tilt of about 45° for flood Nozzles or tips, RA Raindrop® and WRW Whirl-Rain® nozzles will significantly improve the spray pattern uniformity.

The nozzle tilt reduces the effect of boom height variation and allows the spray nozzle to maintain a more fully developed pattern even when the nozzle outlet is below the recommended height for the best spray pattern uniformity.

RECOMMENDED OVERLAP AND NOZZLE HEIGHT

100% overlap of spray pattern is recommended for RA Raindrop[®] and WRW Whirl-Rain[®] Nozzles for uniform coverage. Nozzle height is determined by measuring the width of the spray pattern as it hits the ground. This width should be 100% greater or twice as wide as the nozzle spacing. Adjust nozzle height until this is achieved. If a decision to tilt the nozzle is made, do it before measuring the width of the spray on the ground and adjusting nozzle height. See example below.

NOZZLE TYPE DROPLET SIZE COMPARISONS

(Volume median diameter in microns)

| For Nozzles with a | 0.5 gpm Output | Spraying 20 psi | Pressure 40 psi |
|--|--|--------------------|--------------------|

| RA Raindrop [®] Drift Reduction Nozzle | 0.7% | | |
| LF Flat Fan Tip | 7-20% | | |
| | (depending on spray ar | ngle) | |

DRIF (0.5

This is an extended range flat spray tip. It is excellent for Contact Pesticides and Growth Regulators and good for Systemic Pesticides.

Contact Pesticides and Growth Regulators - At medium pressures (20-30 psi) provides medium size droplets for good surface coverage and less drift. At higher pressures (30-60 psi) produces smaller droplets for better coverage. Wide angle 110° tips produce slightly smaller droplets than 80° tips at equal pressures.

Systemic Pesticides - At lower pressures (15-20 psi) produces larger spray droplets and reduces drift while still providing uniform coverage along the boom.

FEATURES:

- Excellent spray distribution over a wide range of pressures (15-60 psi).
- Ideal for rigs equipped with sprayer controllers.
- Reduces drift at lower pressures, better coverage at higher pressures.
- Available in stainless steel and hardened stainless steel in 80° and 110° tip spray angles with VisiFlo color coding.

RECOMMENDED OVERLAP

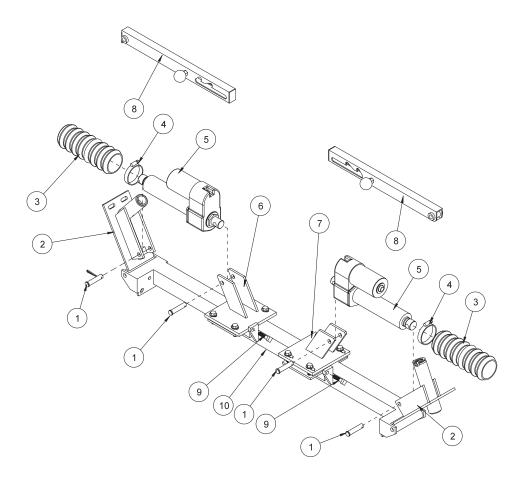

Adjust nozzle spray height to overlap 30% of each edge of pattern.

NOZZLE HEIGHT

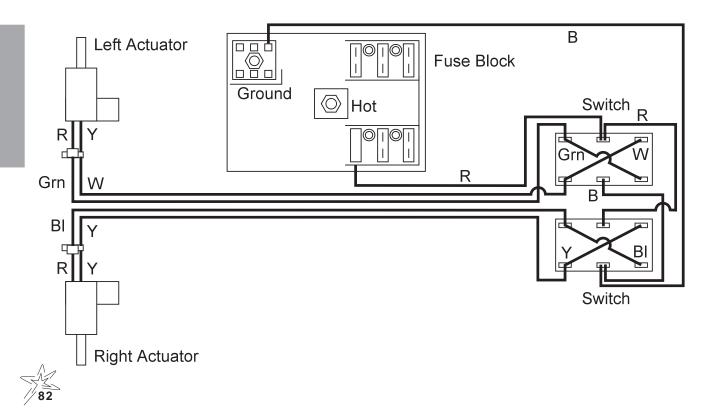

Suggested spray nozzle height with 20" spacing, tip spray angle of 80° should be 17-19", tip spray angle of 110° should be 12-14".

* Part of 10-160 Boom

IINSTALLATION INSTRUCTIONS

Remove Boom Lift(Ref# 8) from boom and replace with the Linear Actuators(Ref# 5). Use the existing hardware. Refer to the wiring diagram below to hook up the wire harness. The switches mount in the seat panel on the right side. Refer to the decal for correct placement. Use the $14^{1}/_{2}$ Nylon Ties to bind wire harness to main frame so that it does not drag.

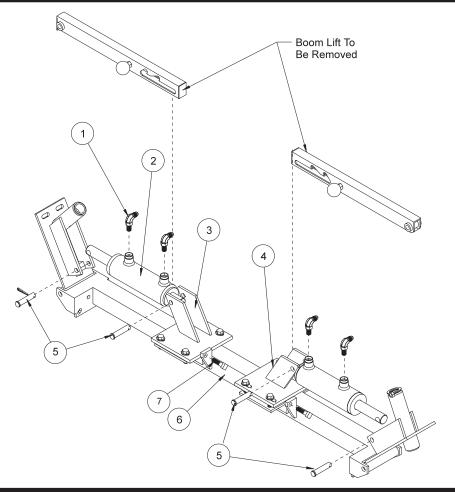

Use dielectric grease on all electrical connections.

Part of 10-160 Boom

INSTALLATION INSTRUCTIONS

*

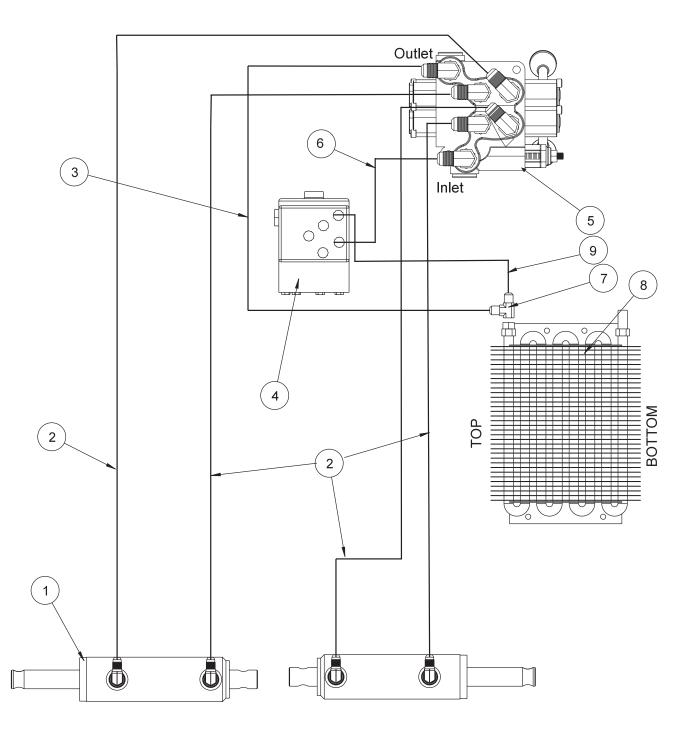

- 1. Shut machine off. Set park brake. Allow system to cool down.
- 2. Remove the boom lifts from boom and replace with hydraulic cylinder(Ref# 2). Use the existing hardware.
- 3. Refer to the valve drawing for placement of fittings. The valve mounts in the seat panel on the right side. Use two $\frac{1}{4}$ 20 x 2 bolts, washers, lock washers, and nuts. Refer to the decal for correct placement.
- 4. Remove the hose from the bottom of the oil cooler that comes out of the top of the tee. This hose traces back to the top of the orbitrol. Place that hose to the inlet side of the hydraulic valve.
- 5. Use the short hose 10-146(Ref# 3)to connect the outlet side of the valve to the tee on the oil cooler.
- 6. Use the four other hoses to connect the valve to the hydlauic cylinders. Refer to the hydraluic drawing.

HOSE REEL MOUNTING INSTRUCTIONS

- 1. Wear protective clothing when draining the tank and taking apart the lines.
- 2. Drain tank and spray system in a safe and approved method insuring that no chemical or water remain in tank as you will be taking apart lines.
- 3. Remove key from ignition, set park brake and block wheels.
- 4. Remove square rubber covers on boom carriers.
- 5. Place hose reel bracket inside the boom carrier tubes with arms pointing toward front of machine..
- Lower bracket until top hole in bracket lines up with hole in upright. Use four ³/₈ 16 x 3³/₄ bolts and four ³/₈ 16 lock nuts with nuts on inside of uprights.
- 7. Put hose reel on hose reel bracket with fitting on left side of machine. Use four bolts $\frac{5}{16}$ 18 x $\frac{1}{2}$ and four $\frac{5}{16}$ 18 lock nuts to hold in place. Tighten bolts.
- 8. To put handle on, drive roll pin out of the shaft on right side, put handle over shaft and line up holes and replace the roll pin.
- 9. Put 18-249 fitting into hose reel.
- 10. For 1006 System: Remove pressure regulating valve from manifold ball valve. Use a 1" close nipple onn each side of the tee. Place reducer bushing, ³/₄ close nipple, ball valve, and hose barb into tee pointing upward.
- 11. *For 1004 System:* From the back of the machine remove the two elbows at the end of the spray fittings. Insert the ³/₄" tee pointing toward the back of the machine. Insert the ³/₄" hose barb elbow into the top of the tee. This goes the the right boom section. Place a ³/₄" close nipple into the open end of the tee and add the ³/₄" FPT elbow pointing upward. Insert the ³/₄" reducer bushing, ball valve, and hose barb.
- 12. Use 8887-46 hose to connect reel to ball valve, clamp with 18-040 hose clamps.
- 13. Use 22-075 cable ties to tie hose to main feed hose.

HOSE REEL MOUNTING INSTRUCTIONS

- 1. Wear protective clothing when draining the tank and taking apart the lines.
- 2. Drain tank and spray system in a safe and approved method insuring that no chemical or water remain in tank as you will be taking apart lines.
- 3. Remove key from ignition, set park brake and block wheels.
- 4. Remove square rubber covers on boom carriers.
- 5. Place hose reel bracket inside the boom carrier tubes with arms pointing toward front of machine..
- Lower bracket until top hole in bracket lines up with hole in upright. Use four ³/₈ 16 x 3³/₄ bolts and four ³/₈ 16 lock nuts with nuts on inside of uprights.
- 7. Put hose reel on hose reel bracket with fitting on left side of machine. Use four bolts $\frac{5}{16}$ 18 x $\frac{1}{2}$ and four $\frac{5}{16}$ 18 lock nuts to hold in place. Tighten bolts.
- 8. To put handle on, drive roll pin out of the shaft on right side, put handle over shaft and line up holes and replace the roll pin.
- 9. Put 16-153 elbow into hose reel.
- 10. For 1006 & 1002 System: Remove pressure regulating valve or motorized control valve from manifold ball valve. Use a 1" close nipple on each side of the tee. Place reducer bushing, ³/₄ close nipple, ball valve, and hose barb into tee pointing upward.
- 11. *For 1004 System:* From the back of the machine remove the two elbows at the end of the spray fittings. Insert the ³/₄" tee pointing toward the back of the machine. Insert the ³/₄" hose barb elbow into the middle of the tee. This goes the the right boom section. Place a ³/₄" close nipple into the open end of the tee and add the ³/₄" FPT elbow pointing upward. Insert the ³/₄" close nipple, ball valve, and hose barb.
- 12. Use 8887-46 hose to connect reel to ball valve, clamp with 18-040 hose clamps.
- 13. Use 22-075 cable ties to tie hose to main feed hose.

(Continued on next page)

ELECTRIC HOSE REEL WIRING DIAGRAM

HOSE REEL ADJUSTMENTS

OPERATIONAL CHECK:

- 1. Pull hose off drum at least on full revolution. A clicking noise should be heard from locking mechanism.
- 2. Let the hose retract.
- 3. Pull the hose off until the first click is heard. Drum should lock when the hose tension is removed.
- 4. Continue pulling the hose, no more than one revolution, until no clicking is heard. Hose should rewind when tension is removed.

SPRING TENSION ADJUSTMENT:

Reels are shipped with three winds of tension adequate for most application. However, if your usage requires either more or less initial tension, perform the following:

- 1. Make sure spring is locked.
- 2. Disconnect inlet hose to permit the hose to go around the drum.
- 3. To adjust the spring tension, add or remove the wraps of the hose from the drum, one wrap at a time, until the desired tension is obtained.

ROLLER BRACKET ADJUSTMENT:

All hose reels are shipped with the roller bracket in the ceiling mount position. For either floor or wall mount, simply remove the guide arm that is attached to the support frame and rotate it 90°, then reinstall.

HOSE REPLACEMENT PROCEDURE:

- 1. Facing swivel, turn the hose drum clockwise until all of the hose is removed from the drum and the drum is held by locking mechanism. Make sure spring is locked.
- 2. Remove hose clamps and disconnect hose from swivel. Remove old hose.
- 3. Insert new hose through roller guide, connect to swivel and reinstall hose clamps. Use spring guard over hose to protect the hose from being cut by the drum.
- 4. Remove check ball from old hose and install on replacement hose.
- 5. Carefully, keeping the tension on the hose, pull the hose to release the locking mechanism. Let the hose wind on the drum.

| 8 | 33-273 | Auto Blade Type Fuse 30Amp | 1 |

CONNECTION INSTRUCTIONS

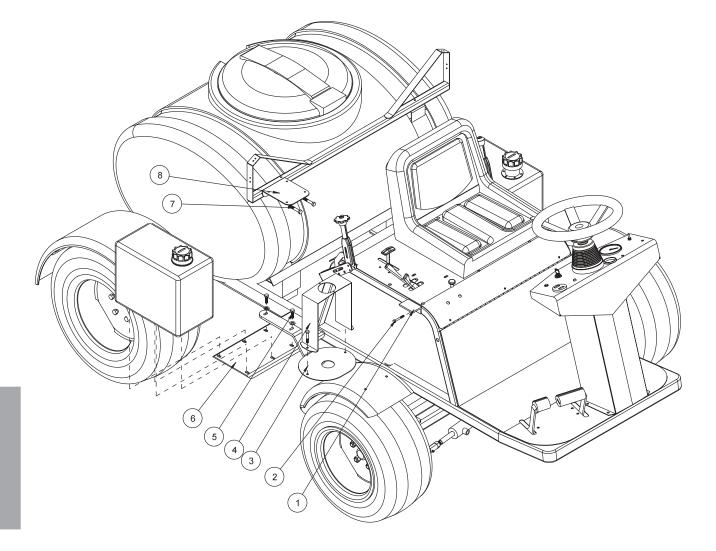

Route wire harness along side of tank and over to battery taking care to stay clear of moving parts or hot engine components. Cut off excess wire and strip back ³/₈". Place one 8901 slide-on yellow connector on red wire and one on the white wire. Connect the two wires to the fuse block first the red to the (+) positive and the white to the (-) negative. Use dielectric grease on all electrical connections.

Make certain you are connecting positive (+) to positive; negative (-) to negative while attaching power leads. If you do not observe polarity, damage will result to electrical components.

10-105 FOAM MARKER MOUNTING DRAWING

| | HNTL-38-16 | Lock Nut ³ / ₈ - 16 | 2 |
| 8 | 10-213 | Foamer Compressor Bracket | 1 |

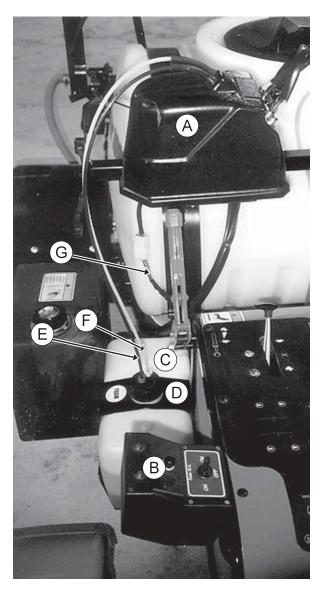

FOAM MARKER INSTALLATION

- 1. Before working on machine stop engine, set park brake, remove key from ignition and block wheels. Disconnect negative (-) battery terminal.
- 2. To mount the control box on the right side tube, you need to drill a $\frac{9}{_{32}}$ hole in the center of the tube even with the seat. Use a $\frac{1}{_4}$ 20 x 2¹/₄ bolt and lock nut to bolt the bracket (Ref# 1)that comes with the control box to the side panel.
- 3. Now mount the foamer compressor bracket (Ref# 8) to the horizontal boom support. Use two $\frac{3}{8}$ 16 x 2¹/₄ bolts and lock nuts.
- 4. Remove the original mounting bracket from the compressor, saving the hardware, and mount the compressor on the bracket you just put on the boom support. Use existing hardware.
- 5. Use the extension wire(10-222) to connect the compressor to the control box.
- 6. Between the gas tank and the machine there are extra holes in the gas tank mount(Ref# 6). Place the foamer tank bracket(Ref# 3)on top of the gas tank mount and bolt down with $\frac{3}{8}$ 16 x 1¹/₄ bolts, washers, and lock nuts.
- Place the foamer tank (21-464) on the foamer tank bracket(Ref# 3) and hold in place with the tank strap(Ref# 4) using two ⁵/₁₆ - 18 x 2 bolts and lock nuts.

(Continued On Next Page)

10-105 FOAM MARKER INSTALLATION

- A. 15-504 Compressor Sub-Assembly
- B. 15-506 Switch Box
- C. 21-464 Foamer Tank
- D. 16-939 Tank Strap
- E. Blue Tube
- F. Clear Tube
- G. 10-222 Extension Wire

CONNECTING THE CAP ASSEMBLY

Connect the blue tube to the tank cap connector which is also connected to the large blue tube which hangs below the cap. This is the soap outlet tube. Connect the clear tube to the other connector on the tank cap. This is the air input tube. Tighten connectors hand tight, assembly tank cap onto tank.

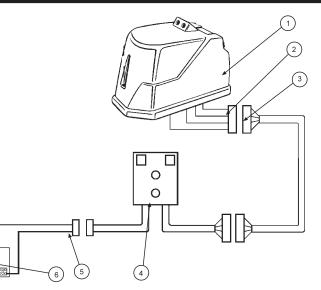

HOSES

Being careful not to cut the tubing, cut the oversleeve back approximately 2" (5cm) to expose blue and clear tubing. Remove blue wing nut from top connector of foam nozzle and slide it on the blue tube with the threads facing toward end of tube. Slide blue tube all the way over the top of the small tube on foam nozzle. Slide wing nut back to the threads and hand tighten. Follow the same steps for the clear tube and tube nut.

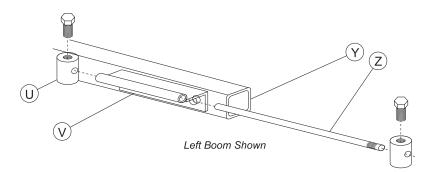

Route the tubing along underside of main frame using tie downs as necessary.

Install opposite ends of air-liquid tubes to compressor, again cutting back the oversleeve approximately 2" (5cm) and inserting blue and clear tubes for the left boom section into the tubing connectors on the right side of compressor as far as possible. Follow the same steps for the right boom tubing. Notice the right boom is inserted into left side of compressor. To release tubing from compressor, hold black ring around tubing, and pull tube out.

10-105 FOAM MARKER WIRING DRAWING

10-105 FOAM MARKER INSTALLATION

FOAMER NOZZLE ASSEMBLY

Slide hose clamp onto drop tube and attach restrictor bell.

FOAMER NOZZLE MOUNTING

Place splined end of rod (Z) into top of foam nozzle assembly. Slide one locking collar (U) onto rod. Slide rod into mounting bracket (V) on boom. Slide second locking collar onto rod. Adjust locking collars and rod so nozzle assembly will clear end of boom. Tighten lock collar bolts to prevent side to side movement.

HOSE GUARD

Hose's must be routed on bottom of square tubing.

Mark 8¹/₂ inches in from cap on end of square tubing (front side).

Clamp hose guard flush with top of square tubing with edge on previous mark. The channel covers hoses.

Install using 3 drill screws (you may drill a ³/₁₆ pilot hole first).

Place another hose guard against first and install in same manner.

Repeat process for other boom.

WIRING

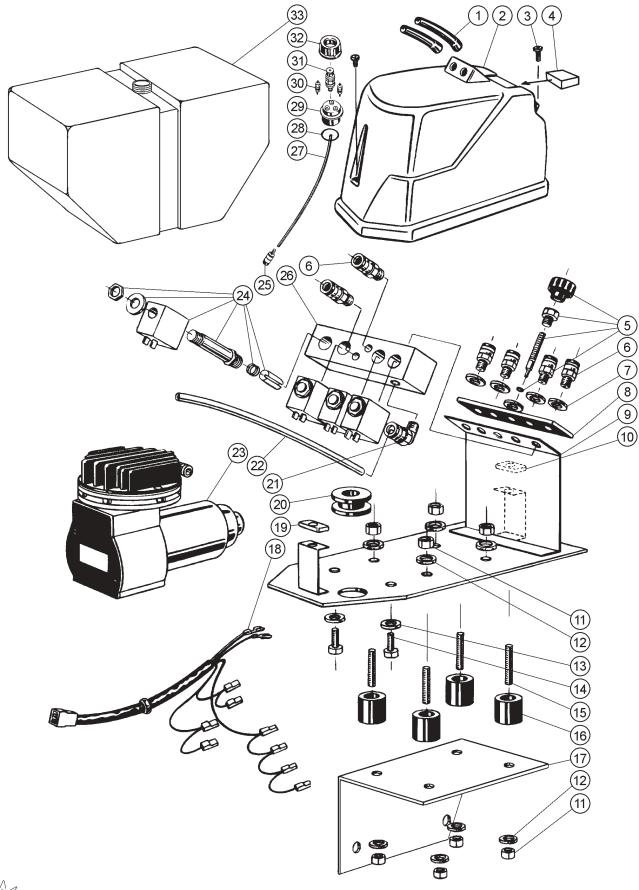

Use dielectric grease on all electrical connections. Connect extension wire(10-222) to the pig tail on the switch box and compressor. Connect power cabel (15-509) to the switch box. Turn the switch off. Route the power wire to the fuse block(on the inside of the engine cover) out of the way of any heat or moving parts. Use nylon ties as needed. Cut the power wire with enough length to connect the fuse block. Put the slide on terminal with heat shrink onto the wire ends and connect to fuse block. Red to positive(+), black to negative(-). Insert 10AMP fuse into slot which has red wire attached to it.

| 6 | 10-152 | Left Spindle | 1 |
| 7* | 16-883 | Magnetic Sensor | 1 |
| 8* | 10-209 | Speedometer Wire Harness | 1 |

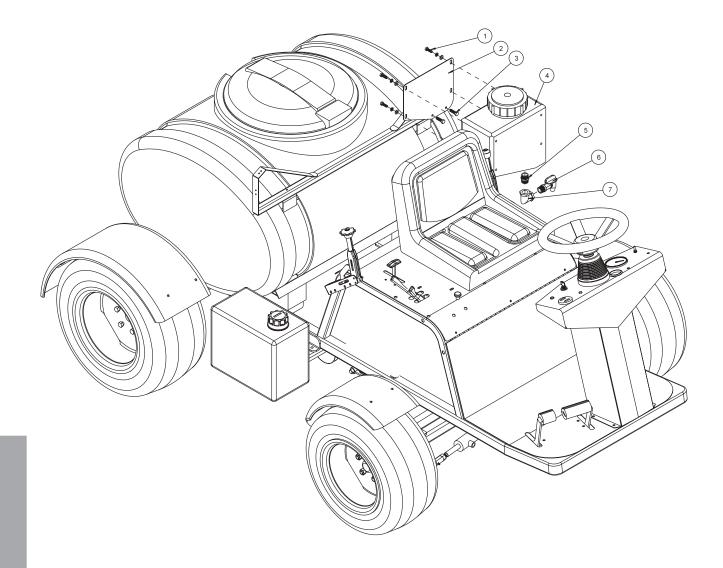

Part of 10-108 Speedometer Kit

SPEEDOMETER KIT INSTALLATION

- 1. Shut off machine, remove key, set park brake, remove negative(-) battery cable from battery.
- 2. Using a utility knife, cut out decal covering hole on left side of dashboard. Remove plug from speedometer hole.
- 3. Put the heat shrink on the red and black wires on speedometer. Put the fork terminals on the wires, slide heat shrink over the ends of terminals and apply heat to shrink. Connect the ground wire 10-183 to the negative (-) terminal on the speedometer using the fork terminal. Use dieelctric grease on all electrical connections.
- 4. Turn the steering wheel all the way to the right. On the inside of the left front wheel there is a sprocket. From the rear of the machine, place the magnetic sensor into the hole on the bracket of the spindle that lines up with the teeth on the sprocket. Adjust the magnetic sensor so that it is between 1/8 and 3/16 inch away from the sprocket.
- 5. Connect the ring terminals on the wire harness to the terminals on the magnetic sensor. Run the wire harness to the center of the machine, along the front axle, up through the hole in the floorboard, up the console and through the hole for the speedometer. Use the nylon ties to tie the wire harness to the axle so that it will not hang loose or rub on anything. Cut off the excess ties.
- 6. Bring the speedometer up to the dashboard. Connect the speedometer wire harness to the center terminal of the speedometer.
- 7. Under the dashboard there is a red wire with a fork terminal that is not connected to anything. Bring it up to the speedometer and connect it to the positive(+) terminal.
- Remove the hold down from the speedometer and slide the speedometer through the hole. Make sure that the speedometer is straight. Put the holddown back on, keeping the speedometer straight and not touching any of the wires.
- 9. Connect the white ground wire from the speedometer to the ground (-) buss bar on the left hand side of the steering column.
- 10. Reconnect the negative (-) battery cable. Speedometer should work. If not, check sensor clearing.

10-106 CLEAR WATER TANK DRAWING

10-106 CLEAR WATER TANK PARTS LIST

| REF# | PART# | DESCRIPTION | QUANTITY |
|------|---------------|--|----------|
| 1 | HB-516-18-075 | Bolt ⁵ / ₁₆ - 18 x ³ / ₄ | 4 |
| | HWL-516 | Lock Washer 5/16 | 4 |
| | HW-516 | Washer 5/16 | 4 |
| 2 | 10-216 | Clear Water Tank Bracket | 1 |
| 3 | HB-38-16-150 | Bolt ³ / ₈ -16 x 1 ¹ / ₂ | 2 |

| 4 | 10-234 | 3 Gallon Rectangular Tank | 1 |
| 5 | 16-158 | Close Nipple ³ / ₄ x ³ / ₄ | 1 |
| 6 | 16-960 | Spigot ³ / ₄ NPT | 1 |
| 7 | 16-151 | Elbow FPT ³ / ₄ x ³ / ₄ | 1 |

CLEAR WATER TANK INSTALLATION

- 1. Clear Water Tank mounts on the left side of the horizontal boom support.
- Insert the close nipple into the bottom of the tank. Then place the elbow on the close nipple so it is pointnig away from the machine. Place the spigot into the elbow. For best results use plumbers tape on all fittings.
- 3. Place the mount bracket onto the boom support using the two $\frac{3}{8}$ bolts and lock nuts.
- 4. Line holes on the tank with holes on the mount bracket and use the $\frac{5}{16}$ bolts to fasten tank to mount bracket.
- 5. Rinse tank with clear water and check for leaks around fittings.

NOTES

LIMITED WARRANTY

SMITHCO warrants this product to be free from defects in material and workmanship under normal use for one year from the date of purchase by the original user. (60 days if product is used for rental purposes.) All warranty claims must be handled through a SMITHCO authorized dealer or by SMITHCO, INC. All transportation charges must be paid by the purchaser.

There is no further express warranty. All implied warranties, including those of merchantability and fitness for a particular purpose, are limited to one year, (60 days if product is used for rental purposes) from the date of purchase by the original user, and to the extent permitted by law any and all implied warranties are excluded and disclaimed after the expiration of such period.

All incidental and consequential damages, including pickup and delivery of the unit, communication, mileage charges and/or rental of a replacement unit during repair, are not covered under this warranty, nor is any loss of income and/or other loss resulting from the failure of the product to function due to a warranty defect.

The following items are not covered under the SMITHCO warranty, and are warranted by their respective manufacturer.

- (a) Engine and engine parts, including starters, generators, alternators and filters.
- (b) Transaxle, differentials, gear boxes and mechanical pumps.
- (c) Hydrostatic transmissions, hydraulic pumps and motors.
- (d) Batteries.
- (e) Wheels and tires.

A copy of the warranty for the above items is furnished if necessary with each SMITHCO product.

Some states do not allow limitations on how long an implied warranty lasts, or the exclusion or limitations of incidental or consequential damages, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights, which may vary from state to state.

Federal law now requires disclosure of the warranty which applies to this product prior to the sale to a customer. Please leave this statement attached to the product and allow the buyer to remove it after purchase.
