Thank you for purchasing a **SMITHCO** product.

Read this manual and all other manuals pertaining to the Spray Star 1750 carefully as they have safety, operating, assembly and maintenance instructions. Failure to do so could result in personal injury or equipment damage.

Keep manuals in a safe place after operator and maintenance personnel have read them. Right and left sides are from the operator's seat, facing forward.

All **SMITHCO** machines have a Serial Number and Model Number. Both numbers are needed when ordering parts. The serial number plate on the Spray Star 1750 is located on the left main frame, by front bumper. Refer to engine manual for placement of engine serial number.

For easy access record your Serial and Model numbers here.

Information needed when ordering replacement parts:

- 1. Model Number of machine
- 2. Serial Number of machine
- 3. Name and Part Number of part
- 4. Quantity of parts

SAFE PRACTICES

- 1. It is your responsibility to read this manual and all publications associated with this machine.
- 2. Never allow anyone to operate or service the machine or its optional equipment without proper training and instructions. Never allow minors to operate any equipment.
- 3. Learn the proper use of the machine, the location and purpose of all the controls and gauges before you operate the equipment. Working with unfamiliar equipment can lead to accidents.
- 4. Wear all the necessary protective clothing and personal safety devises to protect your head, eyes, ears, hands and feet. Operate the machine only in daylight or in good artificial light.
- 5. Inspect the area where the equipment will be used. Pick up all debris you can find before operating. Beware of overhead obstructions and underground obstacles. Stay alert for hidden hazards.
- 6. Never operate equipment that is not in perfect working order or without decals, guards, shields, or other protective devices in place.
- 7. Never disconnect or bypass any switch.
- 8. Carbon monoxide in the exhaust fumes can be fatal when inhaled, never operate a machine without proper ventilation.
- 9. Fuel is highly flammable, handle with care.
- 10. Keep engine clean. Allow the engine to cool before storing and always remove the ignition key.
- 11. Disengage all drives and set park brake before starting the engine.
- 12. Never use your hands to search for oil leaks. Hydraulic fluid under pressure can penetrate the skin and cause serious injury.
- 13. This machine demands your attention. To prevent loss of control or tipping of the vehicle:
 - A. Use extra caution in backing up the vehicle. Ensure area is clear.
 - B. Do not stop or start suddenly on any slope.
 - C. Reduce speed on slopes and in sharp turns. Use caution when changing directions on slopes.
 - D. Stay alert for holes in the terrain and other hidden hazards.
- 14. Before leaving operator's position:
 - A. Disengage all drives.
 - B. Set park brake.
 - C. Shut engine off and remove the ignition key.
 - D. If engine has to run to perform any maintenance keep hands, feet, clothing and all other parts of body away from moving parts.
- 15. Keep hands, feet and clothing away from moving parts. Wait for all movement to stop before you clean, adjust or service the machine.
- 16. Keep the area of operation clear of all bystanders.
- 17. Never carry passengers.
- 18. Stop engine before making repairs/adjustments or checking/adding oil to the crankcase.
- 19. Use parts and materials supplied by **SMITHCO** only. Do not modify any function or part.
- 20. Use caution when booms are down as they extend out beyond the center line of the machine.
- 21. The tank is a confined space, take precaution.

These machines are intended for professional maintenance on golf courses, sports turf, and any other area maintained turf and related trails, paths and lots. No guaranty as to the suitability for any task is expressed or implied.

MAINTENANCE

Before servicing or making adjustments to machine, stop engine and remove key from ignition.

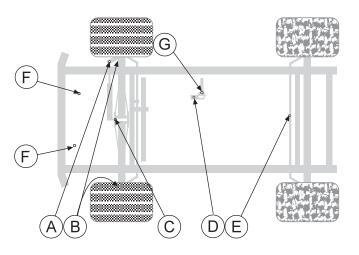

Use all procedures and parts prescribed by the manufacturer's. Read the engine manual before operation.

LUBRICATION

Use No. 2 General purpose lithium base grease and lubricate every 100 hours. The Spray Star 1750 has 9

grease fittings.

- A. One on the rod end of hydraulic cylinder.
- B. One on each the right and left spindles.
- C. One on the center front pivot.
- D. One on the idler arm.
- E. One on the brake relay.
- F. One on each of the pedal relays.
- G. One on the shift arm.

ELECTRICAL CONNECTIONS

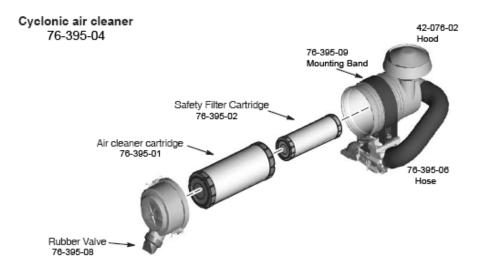

Use dielectric grease on all electrical connections.

AIR CLEANER ON ENGINE

- 1. Unclip the two clips, remove the cover and pull out the element.
- 2. To service, clean by tapping gently on flat surface. Do not oil. Replace if very dirty or damaged.
- 3. Clean out the inside of the body and cover.
- 4. Place the element into the body and put the cover back on..

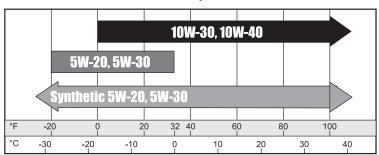

Do not use petroleum solvents, e.g.., kerosene, which will cause cartridge to deteriorate. Do not use pressurized air to clean cartridge. Pressurized air can damage cartridge.

ENGINE OIL

Change and add oil according to chart below based on air temperature at the time of operation. Do not overfill. Use a high quality detergent oil classified "For Service SJ or higher" oil. Use no special additives with recommended oils. Do not mix oil with gasoline.

SAE Viscosity Grades

Starting Temperature Range Anticipated Before Next Oil Change

HYDRAULIC OIL

- 1. Use SAE 10W-40 API Service SJ or higher motor oil.
- 2. For proper warranty, change oil every 500 hours or annually, which ever is first.
- 3. Oil level should be 2-21/2" (5-6.4cm) from top of the tank when fluid is cold. Do not overfill.
- 4. After changing oil, run the machine for a few minutes. Check oil level and for leaks.
- Always use extreme caution when filling hydraulic oil tank or checking level to keep system free of contaminants. Check and service more frequently when operating in extremely cold, hot or dusty conditions.
- 6. If the natural color of the fluid has become black or smells burnt, it is possible that an overheating problem exists.
- 7. If fluid becomes milky, water contamination may be a problem.
- 8. If either of the above conditions happen, change oil immediately after fluid is cool and find the cause. Take fluid level readings when the system is cold.
- In extreme temperatures you can use straight weight oil. We recommend SAE 30W API Service SG when hot (above 90°F (33°C)) and SAE 10W API Service SJ or higher when cold (below 32°F (0°C) ambient temperature. Use either motor oil or hydraulic oil, but do not mix.
- 10. Oil being added to the system must be the same as what is already in the tank. Mark the tank fill area as to which type you put in.

TIRE PRESSURE

Caution must be used when inflating a low tire to recommended pressure. Over inflating can cause tires to explode. All tires should be 20 psi (1.4bar). Improper inflation will reduce tire life considerably.

WHEEL MOUNTING PROCEDURE

- 1. Set park brake. Turn machine off and remove key.
- 2. Block wheel on opposite corner.
- 3. Loosen nuts slightly on wheel to be removed.
- 4. Jack up machine being careful not to damage underside of machine.
- 5. Place wheel on hub lining up bolt holes.
- 6. Torque to 64-74 ft/lb (87-100Nm) using a cross pattern. Retorque after first 10 hours and every 200 hours thereafter.
- 7. Lower machine to ground and remove blocks and jack.

MAINTENANCE

BATTERY

Batteries normally produce explosive gases which can cause personal injury. Do not allow flames, sparks or any ignited object to come near the battery. When charging or working near battery, always shield your eyes and always provide proper ventilation.

Battery cable should be disconnected before using "Fast Charge".

Charge battery at 15 amps for 10 minutes or 7 amps for 30 minutes. Do not exceed the recommended charging rate. If electrolyte starts boiling over, decrease charging.

Always remove grounded (-) battery clamp first and replace it last. Avoid hazards by:

- 1. Filling batteries in well-ventilated areas.
- 2. Wear eye protection and rubber gloves.
- 3. Avoid breathing fumes when electrolyte is added.
- 4. Avoid spilling or dripping electrolyte.

Battery Electrolyte is an acidic solution and should be handled with care. If electrolyte is splashed on any part of your body, flush all contact areas immediately with liberal amounts of water. Get medical attention immediately.

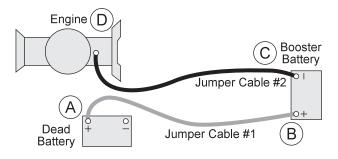

Use of booster battery and jumper cables. Particular care should be used when connecting a booster battery. Use proper polarity in order to prevent sparks.

TO JUMP START (NEGATIVE GROUNDED BATTERY):

- 1. Shield eyes.
- 2. Connect ends of one cable to positive (+) terminals of each battery, first (A) then (B).
- 3. Connect one end of other cable to negative (-) terminal of "good" battery (C).
- 4. Connect other end of cable (D) to engine block on unit being started (NOT to negative (-) terminal of battery)

To prevent damage to other electrical components on unit being started, make certain that engine is at idle speed before disconnecting jumper cables.

STORAGE

If the engine will be out of service for two or more months, use the following storage procedure.

- 1. Clean the exterior surfaces of the engine.
- 2. Change the oil and filter while the engine is still warm from operation.
- 3. The fuel system must be completely emptied, or the gasoline must be treated with a stabilizer to prevent deterioration.

If you choose to use a stabilizer, follow manufacturers recommendations, and add the correct amount for the capacity of fuel system. Fill fuel tank with clean, fresh gasoline. Run engine for 2-3 minutes to get stabilized fuel into carburetor. Close fuel shut-off valve when unit is being stored or transported.

To empty the system, drain fuel tank and carburetor, or run engine until tank and system are empty.

Remove the spark plugs. Add one tablespoon of engine oil into each spark plug hole. Install plugs, but do not connect the plug leads. Crank the engine two or three revolutions.

Store machine in a clean, dry place.

Before servicing or making adjustments to the machine, stop engine, set park break, block wheels and remove key from ignition.

NOTE:

Follow all procedures and ONLY use parts prescribed by the manufacturer. Read the engine manual before maintenance.

The suggested maintenance checklist is not offered as a replacement for the manufacturer's engine manual but as a supplement. You must adhere to the guidelines established by the manufacturer for warranty coverage. In adverse conditions such as dirt, mud or extreme temperatures, maintenance should be more frequent.

Maintenance Service Interval	Maintenance Procedure
	Torque the wheel lug nuts. (64-74 ft/lb (87-100 Nm))
After the first 5 operating hours	Change the engine oil and filter.
After the first 20 operating hours	Replace hydraulic filter
	Check the engine oil.
	Check the hydraulic fluid level.
	Check the tire pressure.
Before each use daily	Check condition of hydraulic hoses and fittings.
	Inspect and clean the machine.
	Inspect cooling system.
	Check the battery fluid level and cable connections.
Every 25 hours	Change oil when operating under heavy load or high
	Change the engine oil and filter.
	Change hydraulic filter
	Check engine for leaks or loose parts.
Frank 400 hours	Check air cleaner.
Every 100 hours	Check tire pressure (20 psi (1.4 bar)).
	Torque the wheel lug nuts. (64-74 ft/lb (87-100 Nm))
	Grease Machine.
	Check belt tension (where needed)
Every 200 Hours	Torque the wheel lug nuts. (64-74 ft/lb (87-100 Nm))
	Change oil filter
Every 250 hours	Change hydraulic filter
	Clean battery terminals
Every 400 hours	Check spark plugs
	Lubricate machine
	Visual inspection of machine and hydraulic hoses
Every 500 hours or yearly	Change oil.
Every 500 hours of yearly	Torque lug nuts.
	Check battery terminals and electrolyte level.
	Change all filters.

WHEEL CREEP

"Creep" is when the engine is running and hydrostatic transmission is in neutral, but due to inadequate alignment, wheels still move. Do the following procedure to stop this motion.

- 1. Lift up and support machine so rear wheels are off the ground and can turn freely.
- 2. In the engine compartment, the hydrostatic transmission is on the left side. The shift arm (D) is under the pump and comes out the side. The idler arm (B) has a bearing that runs in the notch of the shift arm. Loosen bolt (A).
- 3. With engine running, move bearing (B) so it centers on the shift arm (D) and 'wheel creep' stops.
- 4. Tighten all fasteners and test by using foot pedal linkage to see that 'creep' is removed.
- 5. Turn engine off and lower machine.

SPRAY PUMP WITH BELT

Located to the right of the engine. The belt should have approximately 1/2" (13mm) of deflection in the center of the top strand. Loosen and tighten the 5/16 -18 x 11/4 set screw located on the foot of the pump mount.

PARK BRAKE

Turn knob clockwise on end of park brake to tighten. Turn it counter clockwise to loosen. If finer adjustment is needed turn clevis on brake cable to adjust length of cable.

MASTER BOOM SWITCH (FOOT SWITCH)

The master boom switch, located on the left floorboard is used to override the master switch on the computer console of the spray systems. By pushing down it will turn on/off the booms. *For the 440 System* the Master Switch on the computer **must be off** for the master boom control switch to work.

GROUND SPEED CONTROL (FOOT SWITCH)

The ground speed control does not work the same as an automotive type cruise. The ground speed control is located on the center floorboard and is used to lock forward speed.

TO ENGAGE:

- 1. Flip rocker switch 'On' (green light).
- 2. Obtain desired speed with foot pedal.
- 3. Step on foot switch to lock speed.
- 4. Push foot switch again to disengage.

SPEED CALIBRATION NUMBERS

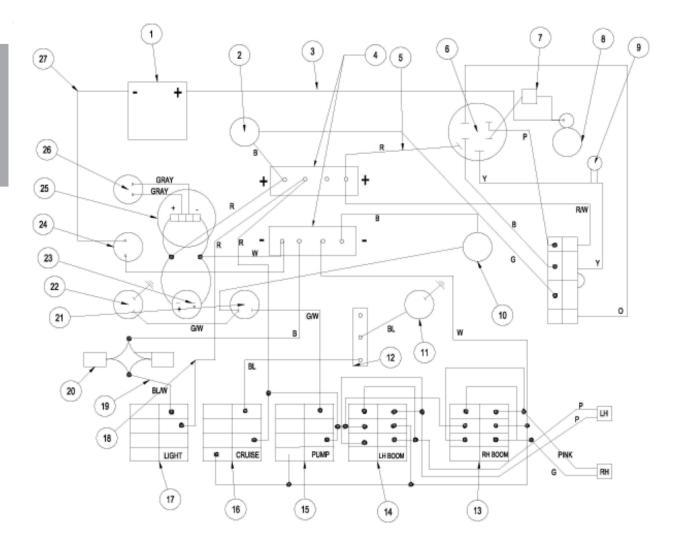

The speed calibration numbers for the Spray Star 3182 is 612.

SPRAY BOSS CONTROL

Engages and disengages speed boss. Forward is engage and all the way back is disengage. When the lever is engaged it sets a stop for the accelerator. The accelerator pedal must be used to maintain this speed. To adjust speed use the knob on the end of the lever, counter clockwise increases speed and clockwise decreases speed. Disengage the lever and you will have full accelerator pedal range.

10	16-995-01		
*	16-524-05	1" Valve ISO-Body Kit (for 15-524)	

WHEN SERVICING VALVE:

Replace valve body with ISO-Body Kit if valve has been leaking internally.

Replace motor assembly if the motor will not run or if the printed circuit board is corroded.

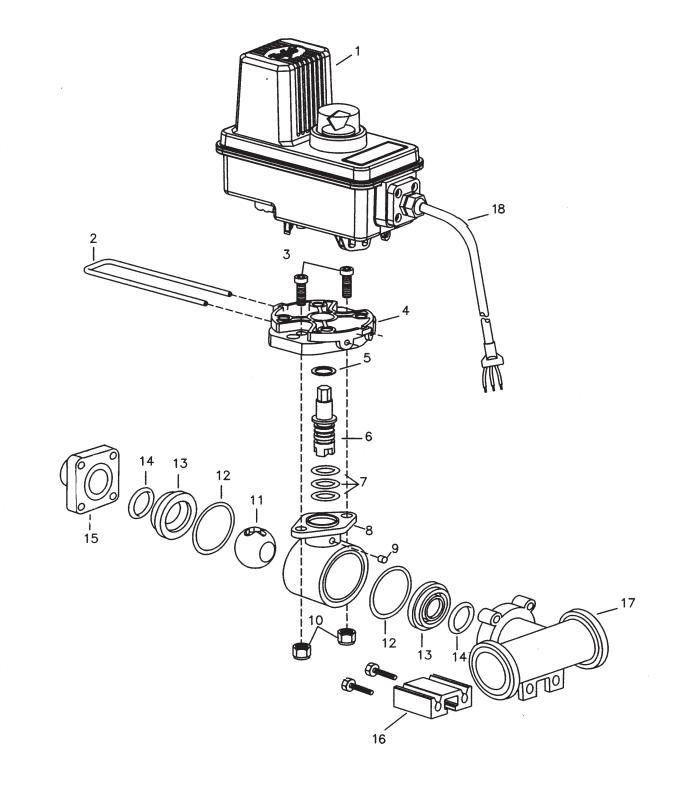

Before reassembling valve, remove the coupler shaft from the valve body. Apply Loctite to coupler shaft and woodruff key. Place the coupler shaft (Ref 7) and the woodruff key (Ref 5) onto the motor shaft. Plug motor into the valve connector coming from Sprayer Control Console. Check that the motor rotates in both directions. Motor must stop when coupler CAM releases printed circuit board switch button.

When reassembling valve, grease both sealing surfaces of coupler shaft. Insert coupler shaft into Iso-flange and be sure seal properly seats on shaft. Install on valve body and apply RTV 738 to mounting holes. Reassemble remaining items as shown in parts diagram on opposite side.

34	18-411	Stainless Steel Pipe Elbow ³ / ₄ x 45°	2
35	11-180	Right-hand Linear Actuator with 4" Stroke	1

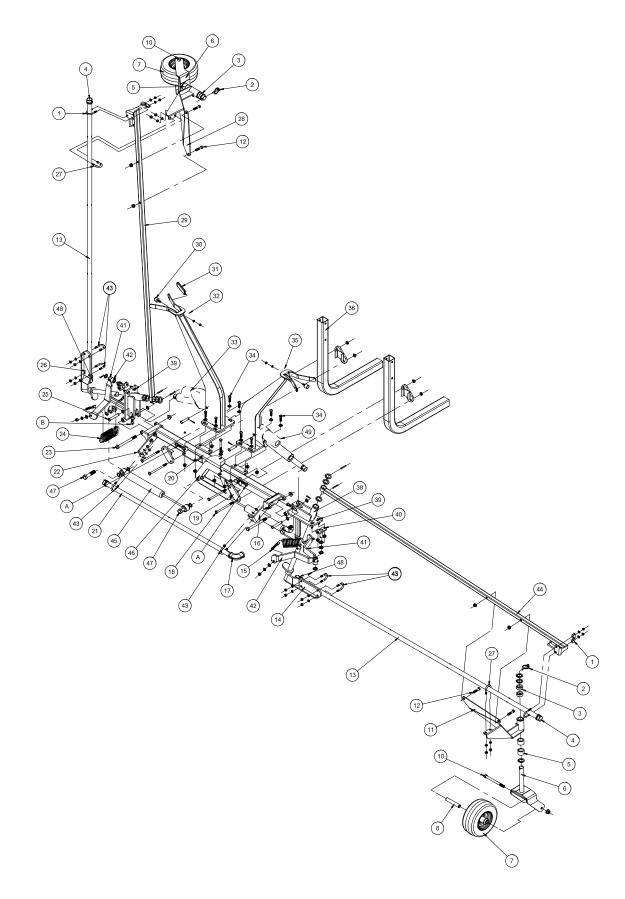

INSTALLATION INSTRUCTION

For best results use Teflon® tape on all fittings.

- 1. The three boom assemblies are not on the packing list but are in carton. The long boom assemblies are the right and left booms. The labels are located on right and left pivot brackets (Ref 20 and 32). The small boom assembly is the center boom. You can NOT order these boom assemblies as one unit. Please refer to parts drawing for individual parts.
- Mount small boom assembly to rear upright support on sprayer using four boom brackets (Ref 10), four bolts, ³/₈ 16 x 5¹/₂ and four lock nuts, ³/₈ 16 (Ref 26). One boom bracket should go on boom assembly and one on upright support of sprayer. Do the same for right and left side. Place boom at desired level (approximately 20" (51 cm) nozzle height) and center. Tighten bolts.
- 3. The actuator brackets are incorporated into the boom holders (Ref 6 and 12) on the center mount (Ref 11) using ³/₈ 16 x 1¹/₄ bolts, washers and lock nuts, with washers over the slots. Snug up the bolts so that you can adjust the boom holders with the set screws (Ref 24) on the center mount after booms have been mounted.
- Take right boom and slide pivot bracket (Ref 21) in center mount (Ref 11) and hold in place with ¹/₂ - 13 x 5¹/₂ bolt and ¹/₂ - 13 center lock nut (Ref 29). Do not over tighten, boom must be able to move up and down. Repeat for left boom.
- Mount actuator (Ref 13) fixed end to actuator bracket and ram end to pivot bracket using ¹/₂ x 2¹/₄ clevis pins and ¹/₈ x 1 cotter pins (Ref 8). It may be necessary to lift boom slightly for proper fit. Repeat process for other boom.
- 6. Hook hoses to respective fittings using hose clamps (18-040). The hose coming from right side of sprayer goes to straight fitting on right boom. Center hose from sprayer goes to straight fitting on center boom. The left hose from sprayer goes to straight fitting on left boom. Be sure all clamps are tight.
- 7. Connect wire harness to actuator. Use two nylon ties (22-075) to hold wire to fixed end of actuators.
- 8. Use boom switches to completely extend actuator and lower booms.
- 9. Using set screws (Ref 24) adjust actuator brackets so nozzles of booms are at same height with nozzles of center section. Tighten bolts holding actuator brackets to center mount and locknuts on set screws.
- 10. Make certain set screws on the pivot brackets (Ref 21) on both sides are completely screwed in. Raise booms with boom switches all the way up, adjust set screws (Ref 24) so they contact the stop.

30-003 20' TERRAIN FOLLOWING BOOM DRAWING

For best results use Teflon® Tape on all fittings.

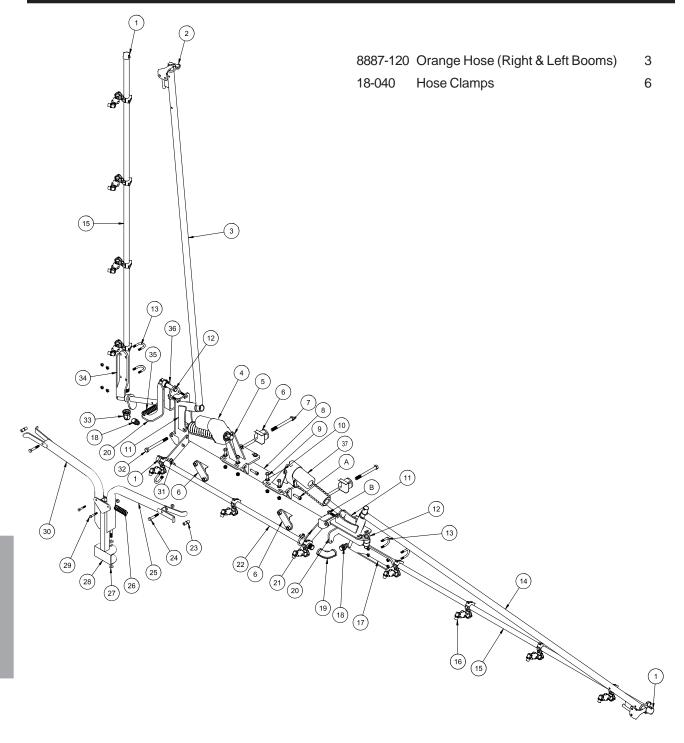

- 1. The three boom assemblies are not on the packing list but are in carton. You can NOT order these boom assemblies as one unit. Please refer to parts drawing for individual parts. The long boom assemblies are the right and left booms. The labels are located on right and left pivot brackets (Ref 14 and 26). The small boom assembly is the center boom. Each assembly is shipped with the nozzle bodies (16-996). The remainder parts of the nozzles need to be installed.
- Mount small boom assembly to the boom carriers on sprayer, using the four boom brackets (Ref 19), four ³/₈ 16 x 5¹/₂ bolts and lock nuts (Ref 18). One boom bracket should go on boom assembly and one on boom carrier. Do the same for right and left side. Place boom at desired level (approximately 20" (51 cm) and be sure it is centered. Tighten bolts.
- 3. Put the boom holders (Ref 32 and 35) on the center mount (Ref 20) using ³/₈ 16 x 1¹/₄ bolts, washers and lock nuts (Ref 34), with washers next to slots. Center the bolts in the slots and tighten. The set screws (Ref A) on the center mount should be tightened to the stop. It is used to set the up and down movement of the boom at the castor wheel. *The range of the boom is approximately 32" total (16" up and 16" down).* This can be adjusted by moving the boom holders. In will increase the up range. Out will increase the down range.
- 4. Take right boom and slide pivot bracket (Ref 38) in the center mount (Ref 20) and hold in place with ¹/₂ 13 x 6 bolt and lock nut (Ref 23). Do not over tighten, boom must be able to move up and down. Repeat for left boom. You may need to loosen the pivot (Ref 40) to install ¹/₂ 13 x 6 bolt due to interference with the cam stops (Ref 41 and 42).
- 5. Mount the actuator (Ref 33) with the fixed end to the right and left boom holders (Ref 35 and 32) using ¹/₂ x 2 clevis pin and cotter pin. Mount the ram end to the pivot brackets (Ref 38) using ¹/₂ x 2³/₄ clevis pin and cotter pin (Ref 25) with the ¹/₂ x 14GA machine bushing on the outside of the pivot brackets.
- 6. Hook hoses to the respective fittings using hose clamps (18-040). The hose coming from the right side of the sprayer goes to the straight fitting on the right boom. The center hose from the sprayer goes to the straight fitting on the center boom. The left hose from the sprayer goes to the straight fitting on the left boom. Be sure all hose clamps are tight.
- 7. Now install the wiring harness. Refer to the wiring diagram.
- 8. Lower the booms so that the ends are at a height that you can work at.
- Put the left castor wheel bracket (Ref 28) onto the left boom as shown. Using two ³/₈ 16 x 1³/₄ bolts and lock nuts (Ref 12) and one u-bolt, two ⁵/₁₆ stainless steel lockwashers and stainless steel ⁵/₁₆ 24 nuts (Ref 27). Repeat for the right boom with the right castor wheel bracket (Ref 11) using the same hardware.
- 10. Put the assembled castor forks into the castor wheel brackets, adjusting the spacers to get the boom height you desire.
- 11. Make certain set screws (Ref B) on both sides are completely screwed in. Raise booms with boom switches all the way up. Adjust set screws (Ref B) so they contact the stop and lock.
- 12. Install center stabilizer mount (Ref 45) onto center boom (Ref 20) with the ³/₈ 16 x 3 bolt, washers and lock nuts.
- 13. Place stabilizers (Ref 46) into pivot brackets (Ref 38) with 5/8 11 x 3 bolts, machine bushings and lock nuts (Ref 47). Place rod end of stabilizers into center stabilizer mount. Make sure all bolts are tight.

BOOMS WILL NOT FOLD FORWARD!! SPRINGS CAN BE DAMAGED.

INSTALLATION INSTRUCTIONS

For best results use Teflon® tape on all fittings.

- 1. The three boom assemblies are not on the packing list but are in carton. The long boom assemblies are the right and left booms. The labels are located on right and left pivot brackets (Ref 17 and 34). The small boom assembly is the center boom. You can NOT order these boom assemblies as one unit. Please refer to parts drawing for individual parts.
- Mount small boom assembly to rear upright support on sprayer using four boom brackets (Ref 6), four bolts, ³/₈ 16 x 5¹/₂ and four lock nuts, ³/₈ 16 (Ref 7). One boom bracket should go on boom assembly and one on upright support of sprayer. Do the same for right and left side. Place boom at desired level (approximately 20" (51 cm) nozzle height) and center. Tighten bolts.
- Put the actuator brackets (Ref 5 and 10) on the center mount (Ref 8) using ³/₈ 16 x 1¹/₄ bolts, washers and lock nuts, with washers over the slots. Snug up the bolts so that you can adjust actuator brackets with the set screws (Ref A) on the center mount after booms have been mounted.
- Take right boom and slide pivot bracket (Ref 11) in center mount (Ref 8) and hold in place with ¹/₂ 13 x 5¹/₂ bolt and ¹/₂ 13 center lock nut (Ref 32). Do not over tighten, boom must be able to move up and down. Repeat for left boom.
- Mount actuator (Ref 4) fixed end to actuator bracket and ram end to pivot bracket using ¹/₂ x 2¹/₄ clevis pins and ¹/₈ x 1 cotter pins. It may be necessary to lift boom slightly for proper fit. Repeat process for other boom.
- 6. Hook hoses to respective fittings using hose clamps (18-040). The hose coming from right side of sprayer goes to straight fitting on right boom. Center hose from sprayer goes to straight fitting on center boom. The left hose from sprayer goes to straight fitting on left boom. Be sure all clamps are tight.
- 7. Connect wire harness to actuator. Use two nylon ties (22-075) to hold wire to fixed end of actuators.
- 8. Use boom switches to completely extend actuator and lower booms.
- 9. Using set screws (Ref A) adjust actuator brackets so nozzles of booms are at same height with nozzles of center section. Tighten bolts holding actuator brackets to center mount and locknuts on set screws.
- 10. Make certain set screws (B) on both sides are completely screwed in. Raise booms with boom switches all the way up, adjust set screws (A) so they contact the stop.

INSTALLATION INSTRUCTIONS

For best result use Teflon® tape on all fittings.

- The three boom assemblies are not on the packing list but are in the carton. The long boom assemblies are the right and left booms. The labels are located on the pivot brackets (Ref 13 and 26). The small boom assembly is the center boom. Each assembly is shipped with the nozzle bodies (16-996) attached. The remainder part of the nozzles need to be installed. You can NOT order these boom assemblies as one unit. Please refer to parts drawing for individual parts.
- Mount small boom assembly to the boom carriers on sprayer using four boom brackets (Ref 8), four bolts, ³/₈ 16 x 5¹/₂ and four lock nuts, ³/₈ 16 (Ref 7). One boom bracket should go on boom assembly and one on boom carrier. Do the same for right and left side. Place boom at desired level (approximately 20" (51 cm) nozzle height) and center. Tighten bolts.
- Put the actuator brackets (Ref 20 and 22) on the center mount (Ref 21) using ³/₈ 16 x 1¹/₄ bolts, washers and lock nuts, with washers over the slots. Snug up the bolts so that you can adjust actuator brackets with the set screws (Ref A) on the center mount after booms have been mounted.
- 4. Take right boom and slide pivot bracket (Ref 24) in center mount (Ref 21) and hold in place with ¹/₂ 13 x 5¹/₂ bolt and ¹/₂ 13 center lock nut (Ref 32). Do not over tighten, boom must be able to move up and down. Repeat for left boom.
- 5. Install boom lifts (Ref 31) using clevis pin and cotter pin (Ref 27) so the bushing end hooks to the pivot bracket (Ref 24) and the slotted end hooks to the actuator bracket (Ref 20 and 22).
- 6. Hook hoses to respective fittings using hose clamps (18-040). The hose coming from right side of sprayer goes to straight fitting on right boom. Center hose from sprayer goes to straight fitting on center boom. The left hose from sprayer goes to straight fitting on left boom. Be sure all clamps are tight.
- 7. Use the adjustment slots on the boom lifts to completely lift and lower booms.
- 8. Using set screws (Ref A) adjust actuator brackets so nozzles of booms are at same height with nozzles of center section. Tighten bolts holding actuator brackets to center mount and locknuts on set screws.
- 9. To install boom carriers (15-328) and latch (15-437) see drawing. The boom holders should point upward and latch pointing outward. Use 8 32 x 1¹/₂ machine screws, nuts and washers to install latch to boom carriers.
- 10. To put booms into boom carriers, booms must be down. Push booms towards front of machine and lift boom slightly to clear fenders. Disconnect latch and put it over brush guard and reconnect.
- 11. Put the viton gaskets (16-800), Raindrop tips (16-805) and quick TeeJet caps (16-921) on the nozzle bodies (16-996) on the three boom sections.
- 12. Make certain set screws (B) on both sides are completely screwed in and locked with the lock nut.

10-300 18' TERRAIN FOLLOWING BOOM DRAWING

For best results use Teflon® Tape on all fittings.

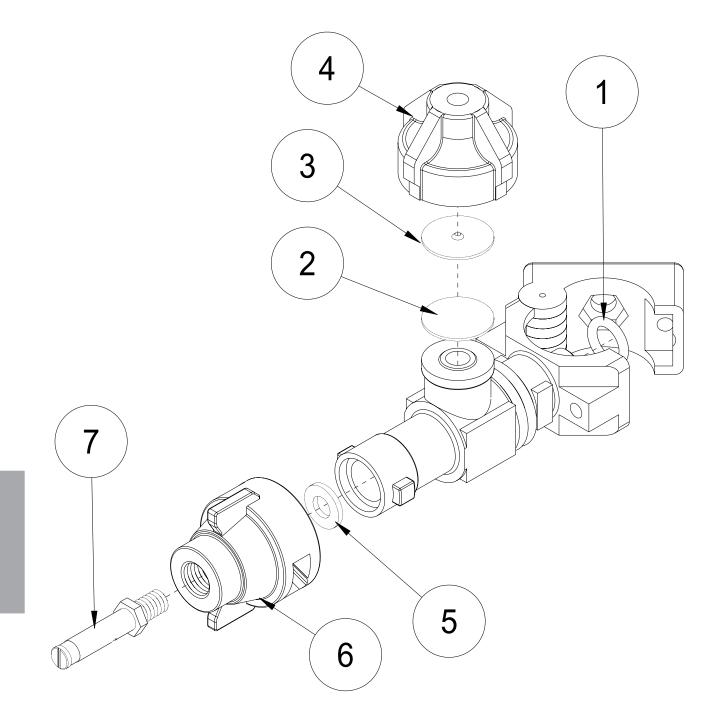

- 1. The three boom assemblies are not on the packing list but are in carton. You can NOT order these boom assemblies as one unit. Please refer to parts drawing for individual parts. The long boom assemblies are the right and left booms. The labels are located on right and left pivot brackets (Ref 14 and 26). The small boom assembly is the center boom. Each assembly is shipped with the nozzle bodies (16-996). The remainder parts of the nozzles need to be installed.
- Mount small boom assembly to the boom carriers on sprayer, using the four boom brackets (Ref 19), four ³/₈ 16 x 5¹/₂ bolts and lock nuts (Ref 18). One boom bracket should go on boom assembly and one on boom carrier. Do the same for right and left side. Place boom at desired level (approximately 20" (51 cm) and be sure it is centered. Tighten bolts.
- 3. Put the boom holders (Ref 32 and 35) on the center mount (Ref 20) using ³/₈ 16 x 1¹/₄ bolts, washers and lock nuts (Ref 34), with washers next to slots. Center the bolts in the slots and tighten. The set screws (Ref A) on the center mount should be tightened to the stop. It is used to set the up and down movement of the boom at the castor wheel. *The range of the boom is approximately 32" total (16" up and 16" down).* This can be adjusted by moving the boom holders. In will increase the up range. Out will increase the down range.
- 4. Take right boom and slide pivot bracket (Ref 38) in the center mount (Ref 20) and hold in place with ¹/₂ 13 x 6 bolt and lock nut (Ref 23). Do not over tighten, boom must be able to move up and down. Repeat for left boom. Yu may need to loosen the pivot (Ref 40) to install ¹/₂ 13 x 6 bolt due to interference with the cam stops (Ref 41 and 42).
- Mount the actuator (Ref 33) with the fixed end to the right and left boom holders (Ref 35 and 32) using ¹/₂ x 2 clevis pin and cotter pin. Mount the ram end to the pivot brackets (Ref 38) using ¹/₂ x 2³/₄ clevis pin and cotter pin (Ref 25) with the ¹/₂ x 14GA machine bushing on the outside of the pivot brackets.
- 6. Hook hoses to the respective fittings using hose clamps (18-040). The hose coming from the right side of the sprayer goes to the straight fitting on the right boom. The center hose from the sprayer goes to the straight fitting on the center boom. The left hose from the sprayer goes to the straight fitting on the left boom. Be sure all hose clamps are tight.
- 7. Now install the wiring harness. Refer to the wiring diagram.
- 8. Lower the booms so that the ends are at a height that you can work at.
- Put the left castor wheel bracket (Ref 28) onto the left boom as shown. Using two ³/₈ 16 x 1³/₄ bolts and lock nuts (Ref 12) and one u-bolt, two ⁵/₁₆ stainless steel lockwashers and stainless steel ⁵/₁₆ 24 nuts (Ref 27). Repeat for the right boom with the right castor wheel bracket (Ref 11) using the same hardware.
- 10. Put the assembled castor forks into the castor wheel brackets, adjusting the spacers to get the boom height you desire.
- 11. Make certain set screws (Ref B) on both sides are completely screwed in. Raise booms with boom switches all the way up. Adjust set screws (Ref B) so they contact the stop and lock.
- 12. Install center stabilizer mount (Ref 45) onto center boom (Ref 20) with the ³/₈ 16 x 3 bolt, washers and lock nuts.
- 13. Place stabilizers (Ref 46) into pivot brackets (Ref 38) with5/8 11 x 3 bolts, machine bushings and lock nuts (Ref 47). Place rod end of stabilizers into center stabilizer mount. Make sure all bolts are tight.

We do not recommend putting these booms into the forward position.

NOZZLE ASSEMBLY DRAWING

Accessorie

NOZZLE ASSEMBLY PARTS LIST

REF#	PART#	DESCRIPTION	QUANTITY
1*	16-920-03	O-Ring	1
2*	16-920-05	Diaphragm Teflon (Optional)	1
3*	16-920-06	Diaphragm EPDM Rubber (Standard)	1
4*	16-798	Chemsaver End Cap	1
5	16-800	Gasket Viton	1
6	16-921	Сар	1
7	15-588	Turbo Turf Jet Tip #8	1
*	16-996	Body	1

- **NOTE:** When the 16-920-05 Teflon Diaphragm is used, it is placed in the assembly in front of the 16-920-06 EPDM Rubber Diaphragm. Nozzles are located 20" (51 cm) apart on the right, left, and center tubes. There are predrilled holes in all tubes. The Nozzle should be at a 45° angle to the ground for proper application.
- **NOTE:** For all 18' Booms: The eleven 16-996 bodies are installed on the boom sections. The eleven 16-800 viton gasket, 15-588 Turbo Turf Jet Tip #8 and 16-921 cap are in the small parts bag.

TURBO TURFJET TIPS

This is a wide-angle (110°), hollow-cone, drift-reduction nozzle. Replaces conventional flooding nozzles in broadcast applications.

FEATURES:

- Color-coding makes it easy to match nozzle flow rates for easy identification.
- Color-coding is available in sizes 1/4 TTJ02-VS through 1/4 TTJ15-VS.
- Uniform spray distribution.
- A large orifice opening and passages minimize clogging.
- The Turbo TurfJet nozzle's patented design element, a secondary swirl chamber in the nozzle cap, alters the swirling action of the liquid so that the fewer driftable lines are discharged from the secondary orifice.
- Spraying Pressure 25-75 PSI (1.5-5 bar).

NOZZLE TILT

Delavan's extensive research on spray patterns has proven that a tilt of about 45° for flood Nozzles or tips will significantly improve the spray pattern uniformity.

The nozzle tilt reduces the effect of boom height variation and allows the spray nozzle to maintain a more fully developed pattern even when the nozzle outlet is below the recommended height for the best spray pattern uniformity.

RECOMMENDED OVERLAP AND NOZZLE HEIGHT

Adjust spray height in the field to overlap a minimum of 30% of each edge of pattern. Adjust nozzle height until this is achieved. If a decision to tilt the nozzle is made, do it before measuring the width of the spray on the ground and adjusting nozzle height. See example below.

DRIFTABLE FINES PRODUCED

(0.5 gpm at 40 psi)

Nozzle	Percent of Spray Volume
(.5 gpm Output)	less than 200 microns
Turbo TurfJet	<1%

This is an extended range flat spray tip. It is excellent for Contact Pesticides and Growth Regulators and good for Systemic Pesticides.

Contact Pesticides and Growth Regulators - At medium pressures (20-30 psi) provides medium size droplets for good surface coverage and less drift. At higher pressures (30-60 psi) produces smaller droplets for better coverage. Wide angle 110° tips produce slightly smaller droplets than 80° tips at equal pressures.

Systemic Pesticides - At lower pressures (15-20 psi) produces larger spray droplets and reduces drift while still providing uniform coverage along the boom.

FEATURES:

- Excellent spray distribution over a wide range of pressures (15-60 psi).
- Ideal for rigs equipped with sprayer controllers.
- Reduces drift at lower pressures, better coverage at higher pressures.
- Available in stainless steel and hardened stainless steel in 80° and 110° tip spray angles with VisiFlo color coding.

RECOMMENDED OVERLAP

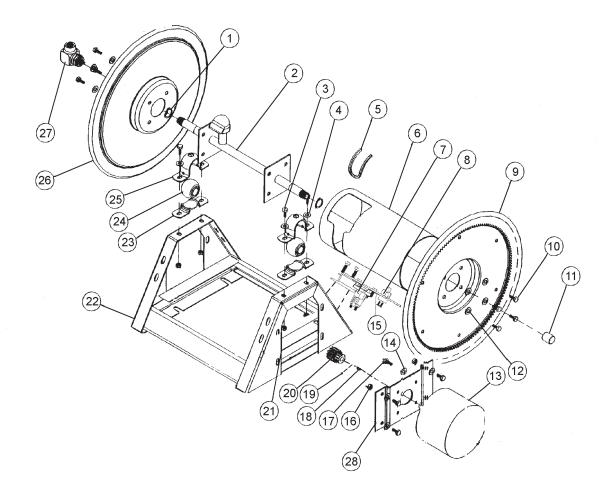

Adjust nozzle spray height to overlap 30% of each edge of pattern.

NOZZLE HEIGHT

Suggested spray nozzle height with 20" spacing, tip spray angle of 80° should be 17-19", tip spray angle of 110° should be 12-14".

Electric Hose Reel (only)

1

ELECTRIC HOSE REEL WIRING DIAGRAM

HOSE REEL ADJUSTMENTS

OPERATIONAL CHECK:

- 1. Pull hose off drum at least one full revolution. A clicking noise should be heard from locking mechanism.
- 2. Let the hose retract.
- 3. Pull the hose off until the first click is heard. Drum should lock when the hose tension is removed.
- 4. Continue pulling the hose, no more than one revolution, until no clicking is heard. Hose should rewind when tension is removed.

HOSE REPLACEMENT PROCEDURE:

- 1. Facing swivel, turn the hose drum clockwise until all of the hose is removed from the drum and the drum is held by locking mechanism. Make sure spring is locked.
- 2. Remove hose clamps and disconnect hose from swivel. Remove old hose.
- 3. Insert new hose through roller guide, connect to swivel and reinstall hose clamps. Use spring guard over hose to protect the hose from being cut by the drum.
- 4. Remove check ball from old hose and install on replacement hose.
- 5. Carefully, keeping the tension on the hose, pull the hose to release the locking mechanism. Let the hose wind on the drum.

ELECTRIC HOSE REEL WIRING PARTS LIST

REF#	PART#	DESCRIPTION	QUANTITY

7	8931-144	10GA White Wire 144"	1
	8901	Slide-On Connector	1
8	33-273	Auto Blade Type Fuse 30Amp	1

CONNECTION INSTRUCTIONS

Route wire harness along side of tank and over to fuse block taking care to stay clear of moving parts or hot engine components. Cut off excess wire and strip back ${}^{3}/{}_{8}$ ". Place one 8963 heat shrink (${}^{1}/{}_{4} \times 1{}^{1}/{}_{4}$) on each wire before crimping 8901 slide on connectors to the red and white wires. Connect the two wires to the fuse block first the red to the (+) positive and the white to the (-) negative. Put the 33-273 auto blade type fuse (30 amp) into fuse block.

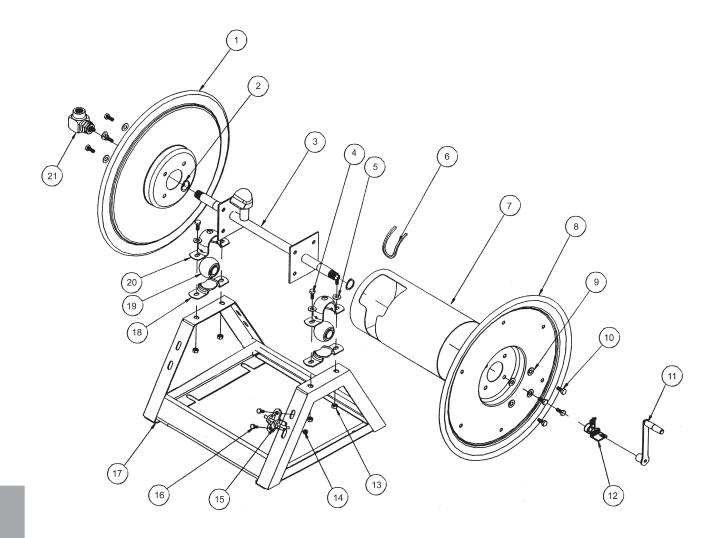

Make certain you are connecting positive (+) to positive; negative (-) to negative while attaching power leads. If you do not observe polarity, damage will result to electrical components.

Use Dielectric Grease On All Electrical Connections

- 1. Wear protective clothing when draining the tank and taking apart the lines.
- 2. Drain tank and spray system in a safe and approved method insuring that no chemical or water remain in tank as you will be taking apart lines.
- 3. Remove key from ignition, set park brake and block wheels.
- 4. Remove square rubber covers on boom carriers.
- 5. Place hose reel bracket inside the boom carrier tube on left side and outside on right side with arms pointing toward front of machine.
- 6. Lower bracket until top hole in bracket lines up with hole in upright. Bolt as shown.
- 7. Put hose reel on hose reel bracket with fitting on left side of machine. Use four bolts $\frac{5}{16}$ 18 x $\frac{1}{2}$ and four $\frac{5}{16}$ 18 lock nuts to hold in place. Tighten bolts.
- 8. Put 18-249 barb fitting into hose reel.

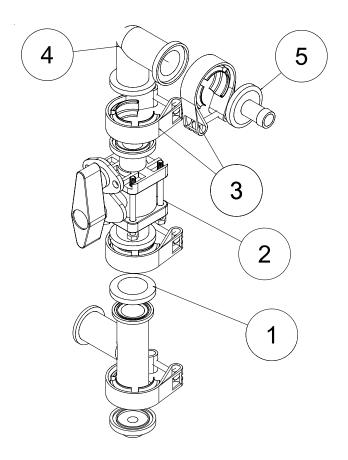

(Continued on next page)

1752 (RAVEN 440) PLUMBING

1754 (SSC 203) PLUMBING

1752 PLUMBING PARTS LIST AND INSTALLATION

REF#	PART#	DESCRIPTION	QUANTITY
1	15-743	Electric ball Valve	1
2	15-742	Inlet Cover	1
3	15-740	50 Series Clamp	3
4	15-748	Reducer Coupling	1
5	15-736	#50 Elbow Coupling	1
6	15-738	Flanged Ball Valve	1
7	15-749	Hose Barb	1

INSTALLATION INSTRUCTIONS

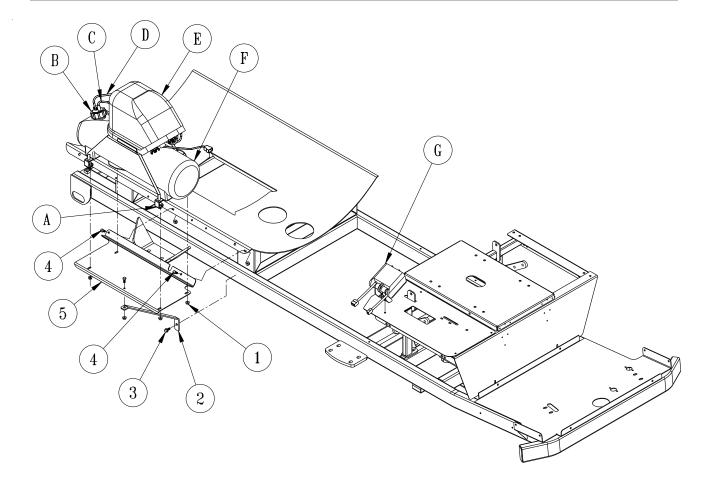

- 1. On the top of the Electric Spray Control Valve (Ref 1) you will find a cover. Remove clamp, o-ring and cover. Install a 15-748 reducer (Ref 4) in place of the cover you just removed. Reinstall clamp and o-ring and tighten. The cap will not be used again.
- 2. Install a 15-736 Elbow onto the top of the reducer with a 15-740 clamp (Ref 3) and O-ring. Rotate it 90° so it points to the rear of the machine, then tighten clamp.
- 3. Install the 15-738 ball valve (Ref 6) onto the elbow using a 15-740 clamp and O-ring. Tighten with the handle on the top or side.
- 4. Install the 15-749 Hose Barb (Ref 7) onto the open end of the ball valve with a 15-740 clamp and o-ring. Tighten.
- 5. Route the orange 3/4" hose fro the hose barb to the hose barb on the hose reel and secure with a 18-040 Hose clamp.
- 6. Secure the orange hose to the machine with a nylon tie strap.

		1754 PLUMBING PARTS LIST AND INSTALLATION	
REF#	PART#	DESCRIPTION	QUANTITY
1	15-778	Blank Guage Port	1
2	15-738	Flanged Ball Valve	1
3	15-740	50 Series Clamp	2
4	15-736	#50 Elbow Coupling	1
5	15-749	Hose Barb	1

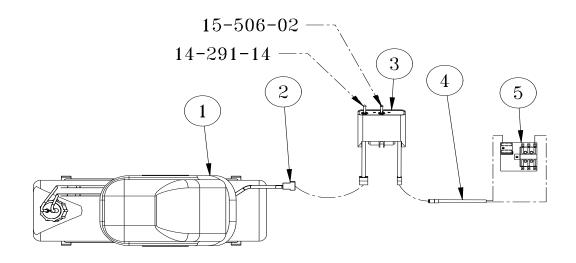

INSTALLATION INSTRUCTIONS

- 1. Between the boom control valves and the fuel tank you will find a tee fitting with a black cap on top of it. Remove the clamp and the cap.
- Install the 15-738 ball valve (Ref 2) onto the top of the tee using the clamp and o-ring you removed in step 1. The Handle can be positioned so it clears the other hoses by rotating it before the clamp is tightened. Tighten clamp when ball valve is in the position you wanted.
- 3. Install the 15-736 Elbow (Ref 4) on top of the ball valve pointing to the back of the machine and secure with 15-740 clamp(Ref 3) and O-ring. Tighten.
- 4. Install the 15-749 flanged hose barb (Ref 5) on to the open end of the elbow with a 15-740 clamp and Oring. Tighten.
- 5. Route the orange ³/₄" hose from the hose barb you just installed to the hose barb on the hose reel. Secure with an 18-40 hose clamp. Secure orange hose to machine with 22-075 nylon ties.
- 6. You will have a reducer coupling, clamp and cap left over that you will not need.

17-505 FOAMMARKER FOR 1750 DRAWING

Safety: Before working on machine stop engine, set park brake, remove key from ignition and block wheels. Disconnect negative (-) battery terminal.

1. Mount the switch box to the panel to the right of the operator's seat. Remove the drill screw on the right hand rear side and mount the Switch Box (Ref. G) using this screw. The switch box must be mounted facing towards the operator's seat.

WIRING

Use dielectric grease on all electrical connections. Connect power cable (15-509) to the switch box. Turn the switch off. Route the power wire to the fuse block (on the inside of the engine cover) out of the way of any heat or moving parts. Use nylon ties as needed. Cut the power wire with enough length to connect the fuse block. Put the slide on terminal with heat shrink onto the wire ends and connect to fuse block. Red to positive(+), black to negative(-). Insert 10 amp fuse into slot which has red wire attached to it.

MOUNTING THE FOAMER UNIT

- 1. Position the Mount Plate (Ref. 5) as illustrated and mount to the Tank Carrier using two ¹/₄-20 x ³/₄ Flange Bolts and ¹/₄-20 Flange Lock Nuts. Leave loose.
- Connect Brace (Ref. 2) to the Mount Plate using one ⁵/₁₆- 18 x ³/₄ Flange Bolt and ⁵/₁₆- 18 Flange Lock Nut. Tighten. Bolt Brace (Ref. 2) to the tapped hole in the mainframe using one ⁵/₁₆- 18 x ³/₄ Flange Bolt. Tighten.
- 3. Tighten hardware connecting Mount Plate (Ref. 5) to the Tank Carrier.
- Place Foamer unit (Refs. A-G) on the Mount Plate (Ref. 5) and bolt in place with four ⁵/₁₆- 18 x ³/₄ Flange Bolts and ⁵/₁₆- 18 Flange Lock nuts (Ref. 1). Foamer must be placed with the Cap Assembly (Ref. B) facing to the <u>rear</u> of the machine.
- 5. Tighten hardware.

CONNECTING THE CAP ASSEMBLY

Connect the blue tube to the tank cap connector which is also connected to the large blue tube which hangs below the cap. This is the soap outlet tube. Connect the clear tube to the other connector on the tank cap. This is the air input tube. Tighten connectors hand tight, assembly tank cap onto tank.

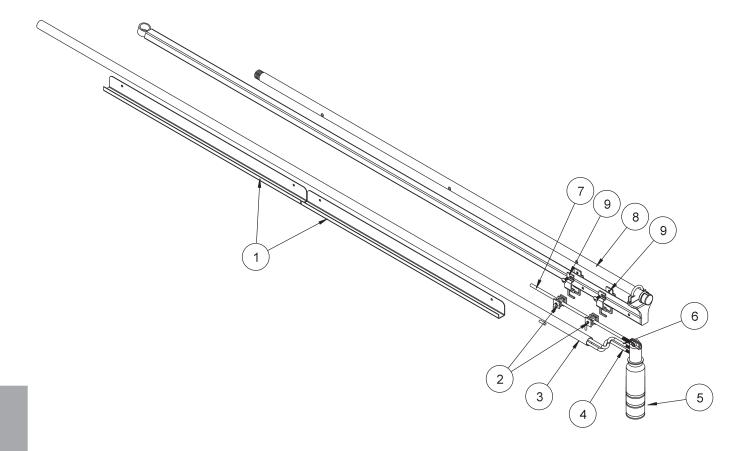

HOSES

Being careful not to cut the tubing, cut the oversleeve back approximately 2" (5 cm) to expose blue and clear tubing. Remove blue wing nut from top connector of foam nozzle and slide it on the blue tube with the threads facing toward end of tube. Slide blue tube all the way over the top of the small tube on foam nozzle. Slide wing nut back to the threads and hand tighten. Follow the same steps for the clear tube and tube nut.

Route the tubing along underside of main frame using tie downs as necessary.

Install opposite ends of air-liquid tubes to compressor, again cutting back the oversleeve approximately 2" (5 cm) and inserting blue and clear tubes for the left boom section into the tubing connectors on the right side of compressor as far as possible. Follow the same steps for the right boom tubing. Notice the right boom is inserted into left side of compressor. To release tubing from compressor, hold black ring around tubing, and pull tube out.

FOAMER NOZZLE MOUNT & HOSE GUARD MOUNT DRAWING

17-505 FOAM MARKER PARTS LIST

REF#	PART#	DESCRIPTION	QUANTITY
1	15-537	Foamer Hose Guard 31"	4
	HSDPS-14-075	Stainless Steel Pan Head Drill Screw 1/4 x 3/4	8
2	16-987	Foam Nozzle Mounting Kit	1 per boom
3	15-507	Foamer Tubing	2
4		Clear Tubing	
5	15-511	Foam Nozzle	2
6		Blue Tubing	
7	15-510-01	Nozzle Mounting Rod	2
8		Boom	
9	16-795	Square Clamp	4

INSTALLATION INSTRUCTIONS

- 1. Slide hose clamp onto drop tube of foam nozzle and attach restrictor bell.
- 2. Place splined end of Nozzle mounting rod (Ref 7) into top of foam nozzle (Ref 5). Tighten screw.
- 3. Slide two foam nozzle mounts (Ref 2) onto the rod. Place square clamps (Ref 9) on foam nozzle mounts and mount the square clamps to the boom (Ref 8). Adjust foam nozzle mounts and clamps so nozzle assembly will clear end of boom. Tighten foam nozzle mounts and square clamps to prevent side to side movement. Do the same to the other side.
- 4. Being careful not to cut the tubing (Ref 3), cut the oversleeve back approximately 2" (5 cm) to expose blue (Ref 6) and clear tubing (Ref 4).
- 5. Remove blue wing nut from top connector of foam nozzle and slide it on the blue tube with the threads facing toward end of tube. Slide blue tube all the way over the top of the small tube on foam nozzle. Slide wing nut back to the threads and hand tighten. Follow the same steps for the clear tube and tube nut.
- 6. Route the tubing along underside of main frame using tie downs as necessary.
- 7. Install opposite ends of air-liquid tubes to compressor, again cutting back the oversleeve approximately 2" (5 cm) and inserting blue and clear tubes for the left boom section into the tubing connectors (Ref A) on the right side of compressor as far as possible.
- 8. Follow the same steps for the right boom tubing. Notice the right boom is inserted into left side of compressor. To release tubing from compressor, hold black ring around tubing, and pull tube out.
- 9. Hose's must be routed on bottom of the boom square tubing.
- 10. Mark 6 inches in from inside edge of foamer nozzle mounting bracket on square boom tubing.
- 11. Place hose guard (Ref 1) flush with top of square tubing with edge on previous mark. The channel covers hoses on the bottom of the square tubing.
- 12. Install hose guard using 2 drill screws (you may want to drill a ³/₁₆ pilot hole first).
- 13. Place another hose guard against first and install in same manner.
- 14. Repeat process for other boom side.
- 15. Connect small plastic electrical plug under compressor to electrical extension cable.
- 16. Cut cable and strip casing, allowing enough length to connect to fuse block.
- 17. Strip and connect slide on connectors to each wire and use the heat shrink.
- 18. Connect black negative (-) wire to the ground and connect red wire to the positive (+).
- 19. Insert 10 amp fuse into slot which red wire was attached to.

6	16-960	Spigot ³ / ₄ NPT	1
7	16-151	Elbow FPT ³ / ₄ x ³ / ₄	1

INSTALLATION INSTRUCTIONS

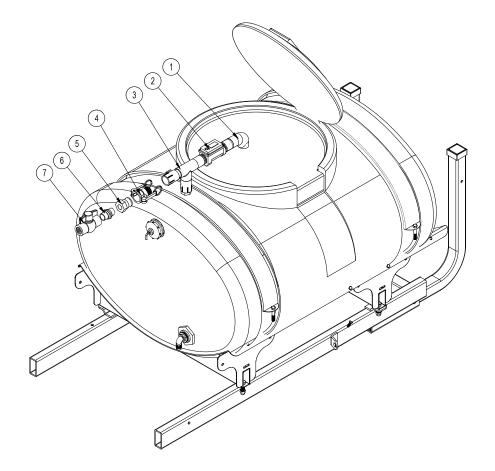

- 1. Fresh Water Wash Tank mounts on the left side of the Roll Bar just above the sprayer control valve.
- 2. Clamp the mount bracket to the roll bar post approximately 19" up from the mount foot and then mark the holes onto the tube with a center punch. Drill the two holes using a $3/_8$ drill bit.
- 3. Secure the bracket to the post with two $\frac{3}{8} \times 2^{3}/_{4}$ bolts and flange lock nuts. Then tighten.
- 4. Install the nipple (Ref 5), elbow (Ref 7) and spigot (Ref 6) into the bottom of wash tank (Ref 4). Use thread tape on all threads.
- 5. Mount the tank onto the mount bracket (Ref 2) using four $\frac{5}{16} \times \frac{3}{4}$ bolts, washers and lockwashers. Tighten.
- 6. Rinse tank with clear water and check for leaks around fittings.

This tank is for fresh clear water ONLY. Do not put chemicals in this tank.

14-515WATER METER KIT (GALLONS)

15-618 WATER METER KIT (LITERS)

WATER KIT PARTS LIST

REF #	PART #	DESCRIPTION	QUANTITY
1	14-524	Filler Outlet	1
2	14-514	Water Meter (Gallons)	1
	14-527	Water Meter (Liters)	1
3	14-525	Filler Inlet	1
4	16-962	1"Quick Coupler (already on machine)	1
5	16-961	1" Adapter Quick Coupler (already on machine)	1

WATER METER KIT INSTRUCTIONS

- 1. Thoroughly flush the service line upstream of the meter to remove dirt and debris.
- 2. The DLJ Meter is for use only with COLD WATER up to 122°F (50°C)
- 3. Slowly open any upstream valves to prevent damage to the meter.

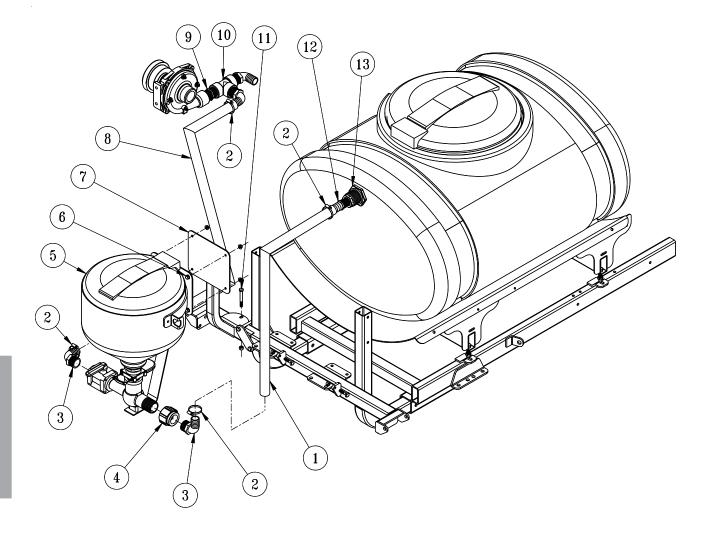

Gallons to Cubic feet Conversion :

Multiply gallons reading by 0.1337 to get cubic feet.

There are 7.48052 gallon per cubic foot.

15-619 CHEMICAL CLEANLOAD SAFE FILL SYSTEM

15-619 CHEMICAL CLEANLOAD PART LIST

4	18-391	Coupling	1
5	15-620	Cleanload Assembly	1
6	HBFL-516-18-075	Flange Bolt, 5/16 - 18 x 3/4	4
	HNFL-516-18	Flange Lock Nut, 5/16 - 18	4
7	15-816	Mixer Mount	1
8	8897-88	1 ¹ /4" Discharge Hose 88"	1
9	16-880	Close Nipple	1
10	18-390	Pipe tee	1
11	HB-38-16-300	Hex Bolt, ³ / ₈ - 16 x 3	1
	HNTL-38-16	Lock Nut, ³ / ₈ - 16	1
12	16-159	Fitting	1
13	16-945	Fitting (part of tank)	

INSTALLATION INSTRUCTIONS

- 1. Make sure sprayer tank is empty and flush all chemical residue from sprayer. Always wear protective clothing, goggles and gloves.
- 2. Disconnect outlet hose from the spray pump then the 90° fitting from the pump.
- 3. Install the close nipple, tee, elbow and the 90° elbow that was removed from the pump. Always use thread sealant on all fittings. Tighten all Fittings. One of the 90° fittings should point towards the right side of the machine and the other one needs to point to the back of the machine.
- 4. Reinstall the outlet hose onto the spray pump and tighten hose clamp.
- 5. Install 88" of $1^{1}/_{4}$ " suction hose onto the elbow on the pump that points back and tighten hose clamp.
- 6. Route the 88" hose to the back of the sprayer so it connects over the top of the left boom support tube.
- 7. Install Mixer Mount (Ref 7) onto the left hand side of the center boom section. The Mount will slide over the 2" tube under the actuator. Secure Mixer Mount with ³/₈ x 3 bolt and lock nut. Tighten.
- 8. Mount Cleanload Assembly onto mixer mount using $\frac{5}{16} \times \frac{3}{4}$ flange bolts and flange nuts. Tighten.
- 9. Install 18-391 reducer coupling (Ref 4) onto outlet side. Then a 16-156 90° elbow (Ref 3) into the coupling pointing up and one into valve with yellow handle. Tighten fittings so that the elbow in the valve is pointing up and forward. The outlet fitting should be pointing up.
- 10. Remove the plug from the top back of the spray tank and install 16-159 hose barb (Ref 12) and tighten. Now the 25" hose can be installed from the tank to the outlet fitting and tighten with clamps.
- 11. The hose from the spray pump can be connected to the inlet fitting and tightened with clamps.
- 12. Make sure all hardware, fittings and clamps are tight. Add about 25 gallons of water to the spray tank. Start sprayer and circulate water through system to check for leaks.
- 13. Be sure to read start up, loading and shutdown instructions for Cleanload Assembly before using with chemicals. When working with chemicals **Always** wear protective clothing, goggles and gloves.

OPERATING INSTRUCTION

STARTUP

- 1. All Cleanload valves must be closed prior to starting: inlet ball valve, knife valve and hopper rinse ball valve.
- 2. Open lid to check for foreign objects which may hinder performance or contaminate the system.
- 3. Close and lock lid by turning cover clockwise.
- 4. Divert pump flow to Cleanload inlet line. A pressure of 30 PSI minimum and 150 PSI maximum must be used. Highest pressures increase eduction rate and available wand suction.
- 5. Turn inlet ball valve on (yellow handle).
- 6. Open knife valve, located on the bottom of hopper, by pushing handle in (red handle).
- 7. Unlock and open lid slowly by turning cover counterclockwise.

LOADING LIQUID OR POWDERED CHEMICAL INTO HOPPER

- 8. Pour required amount of chemical into hopper. Avoid splashing liquids or powdered chemicals outside of hopper.
- 9. Rinse empty chemical containers if applicable. Place container opening over container rinse valve and press down. This will activate the rinse valve and rinse container.
- 10. Rinse Cleanload hopper. Close and lock lid by turning cover clockwise. Release the safety locking band on the hopper rinse ball valve and turn on for 20 seconds. Close ball valve and return locking band to locked position.
- 11. Open lid and inspect for chemical residue. Repeat step 10 as necessary.
- 12. Close knife valve by pulling red handle out towards you. Turn inlet (yellow handle) off.

LOADING LIQUID AND/OR POWDERED CHEMICAL WITH SUCTION LANCE

Note: Lance suction is dependent upon eductor pressure and flow. For best results, use highest pressure available up to 150 PSI maximum.

- 8. Insert lance body with o-ring into eductor until the o-ring is sealed.
- 9. Use the free end of the lance to pierce bag or container to vacuum powdered or liquid chemical.
- 10. Rinse lance. Place lance end into a clean container of water to rinse lance assembly.
- 11. Remove lance body from eductor and drain any remaining fluid into hopper.
- 12. Close knife valve (red handle). Turn inlet valve (yellow handle) off.

SHUTDOWN

- 1. Ensure that:
 - All valves are closed. Be sure to close knife valve first. (Close by pulling red handle out towards you.)
 - Chemical residue has been cleaned.
 - Hopper lid is closed and locked by turning cover clockwise.
- 2. Divert pump flow back to normal operation.

Symptom	Corrective Action
Low eduction rate	Check pump pressure and flow. Cleanload Eductor performance is based on flow and pressure to the system. Note requirements for high eduction rates.
	Increase outlet hose size back to tank.
Plugged or clogged bottle rinse nozzle	Disassemble rotary portion of nozzle from lower valve assembly and back flush until nozzle ports are clear of debris.
Plugged or clogged tank rinse nozzle	Disassemble rotary portion of nozzle from NPT hose barb and back flush until nozzle ports are clear of debris. Remove screen and flush with water to clear away foreign material.
Fitting leaks	Check for cracks in fitting. Replace fitting if necessary. Disassemble and add more joint seal in compound if leak occurs on threads.

DECAL LIST

This is a list of decals located on the Spray Star 1750. Part number, description and location will help in reordering decals.

The Smithco Commercial Products Two-Year Limited Warranty

The Smithco Commercial Products Two-Year Limited Warranty

Smithco, Inc. (Smithco) warrants your 2016 or newer Smithco Commercial Product ("Product") purchased after October 1, 2016 to be free from defects in materials or workmanship for the period of time listed below. Where a warrantable condition exists, Smithco will repair the Product at no cost to you including diagnosis, labor (at the Smithco standard labor rate, subject to the Smithco flat rate schedule), and parts.

Warranty Duration is:

- (1) Two years, 1500 operational hours* from the date of delivery to the original purchaser or Five years from the date of original manufacturer of the product, whichever occurs first. (*Products equipped with hour meter).
- (2) Products used in rental situations are covered for 90 days from date of delivery to original user/renter.

Owner Responsibilities:

As the Product owner, you are responsible for required maintenance and adjustments stated in your Owner's Manual. Failure to perform required maintenance and adjustments can be grounds for disallowing a warranty claim. You are particularly responsible to train all present and future operators of this product on the safe operation of this product at your location.

Instructions for Obtaining Warranty Service:

You are responsible for notifying the Authorized Smithco Products Distributor from whom you purchased the Product as soon as you believe a warrantable condition exists and not later than 30 days from discovery of the condition.

If you need help locating an Authorized Smithco Distributor, or if you have questions regarding your warranty rights or responsibilities, you may contact us at:

Smithco Product Support Department 200 West Poplar Ave. Cameron, Wisconsin 54822 Telephone: 800-891-9435 E-Mail: <u>ProductSupport@Smithco.com</u>

Maintenance Parts:

Parts scheduled for replacement as required maintenance ("Maintenance Parts"), are warranted for the period of time up to the scheduled replacement time for that part.

Items/Conditions Not Covered:

Not all product failures or malfunctions that occur during the warranty period are defects in materials or workmanship. The items/conditions listed below are not covered by this warranty:

Product failures which result from the use of non-Smithco replacement parts, or from installation and use of add-on, modified, or unapproved accessories are not covered.

Product failures that result from operating the Product in an abusive, negligent or reckless manner are not covered.

This warranty does not apply to parts subject to consumption through use, unless found to be defective.

Examples of parts which are consumed, or used up, during normal Product operation include, but are not limited to: blades, tines, teeth, scarifiers, rakes, plates, wear plates, castor wheels, tires, batteries, filters, belts, nozzles, etc.

This warranty does not apply to failures caused by outside influence. Items considered to be outside influence include, but are not limited to, weather, storage practices, contamination, use of unapproved coolants, lubricants, additives, or chemicals, etc.

This warranty does not apply to normal "wear and tear" items. Normal "Wear and Tear" includes, but is not limited to, damage to seats due to wear or abrasion, worn painted surfaces, scratched decals or windows, etc.

Smithco may require the return of failed parts or components in order to determine the validity of any warranty claim.

Smithco will not be obligated to replace components of other manufacturers if inspection by the original component manufacturer indicates that failure was due to normal wear and tear, expected consumption through use or improper care or service.

Other Legal Disclaimers:

The above remedy for product defects through repair or replacement by an authorized Smithco distributor or dealer is the purchaser's sole remedy for any defect. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

THERE ARE NO OTHER EXPRESS WARRANTIES OTHER THAN THOSE SET FORTH ABOVE. ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR USE ARE LIMITED TO THE DURATION OF THE LIMITED WARRANTIES CONTAINED HEREIN.

Some states may not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

THE SMITHCO COMPANY IS NOT LIABLE FOR INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH THE USE OF THE PRODUCT, INCLUDING ANY COST OR EXPENSE OF PROVIDING A SUBSTITUTE PRODUCT OR SERVICE DURING PERIODS OF MALFUNCTION OR NON-USE.

Some states may not allow the exclusion of indirect, incidental or consequential damages, so the above exclusion may not apply to you.
