Warranty	

Thank you for purchasing a **Smithco** product.

Read this manual and all other manuals pertaining to the Spray Star 3180 carefully as they contain safety, operating, assembly and maintenance instructions. Failure to do so could result in personal injury or equipment damage.

Keep manuals in a safe place after operator and maintenance personnel have read them. Right and left sides are from the operator's seat, facing forward.

All **Smithco** machines have a Serial Number and Model Number. Both numbers are needed when ordering parts. Refer to engine manual for placement of engine serial number.

For product and accessory information, help finding a dealer, or to register your product please contact us at www.Smithco.com.

Information needed when ordering replacement parts:

- 1. Model Number of machine
- 2. Serial Number of machine
- 3. Name and Part Number of part
- 4. Quantity of parts

For easy access record your Serial and Model numbers here.

	SKITHE WAYNE, PENNSYLVANIA 19087 USA 610-688-4009 Fax 610-688-6069	C€

SAFE PRACTICES

- 1. It is your responsibility to read this manual and all publications associated with this machine.
- 2. Never allow anyone to operate or service the machine or its optional equipment without proper training and instructions. Never allow minors to operate any equipment.
- 3. Learn the proper use of the machine, the location and purpose of all the controls and gauges before you operate the equipment. Working with unfamiliar equipment can lead to accidents.
- 4. Wear all the necessary protective clothing and personal safety devises to protect your head, eyes, ears, hands and feet. Operate the machine only in daylight or in good artificial light.
- 5. Inspect the area where the equipment will be used. Pick up all debris you can find before operating. Beware of overhead obstructions and underground obstacles. Stay alert for hidden hazards.
- 6. Never operate equipment that is not in perfect working order or without decals, guards, shields, or other protective devices in place.
- 7. Never disconnect or bypass any switch.
- 8. Carbon monoxide in the exhaust fumes can be fatal when inhaled, never operate a machine without proper ventilation.
- 9. Fuel is highly flammable, handle with care.
- 10. Keep engine clean. Allow the engine to cool before storing and always remove the ignition key.
- 11. Disengage all drives and set park brake before starting the engine.
- 12. Never use your hands to search for oil leaks. Hydraulic fluid under pressure can penetrate the skin and cause serious injury.
- 13. This machine demands your attention. To prevent loss of control or tipping of the vehicle:
 - A. Use extra caution in backing up the vehicle. Ensure area is clear.
 - B. Do not stop or start suddenly on any slope.
 - C. Reduce speed on slopes and in sharp turns. Use caution when changing directions on slopes.
 - D. Stay alert for holes in the terrain and other hidden hazards.
- 14. Before leaving operator's position:
 - A. Disengage all drives.
 - B. Set park brake.
 - C. Shut engine off and remove the ignition key.
 - D. If engine has to run to perform any maintenance keep hands, feet, clothing and all other parts of body away from moving parts.
- 15. Keep hands, feet and clothing away from moving parts. Wait for all movement to stop before you clean, adjust or service the machine.
- 16. Keep the area of operation clear of all bystanders.
- 17. Stop engine before making repairs/adjustments or checking/adding oil to the crankcase.
- 18. Use parts and materials supplied by **Smithco** only. Do not modify any function or part.
- 19. Use caution when booms are down as they extend out beyond the center line of the machine.
- 20. The tank is a confined space, take precaution.

These machines are intended for professional maintenance on golf courses, sports turf, and any other area maintained turf and related trails, paths and lots. No guaranty as to the suitability for any task is expressed or implied.

SPECIFICATIONS SPRAY STAR 3180

Cold Cranking Amps 900 minimum
Ground Terminal Polarity Negative (-)
Maximum Length 10.25" (26 cm)
Maximum Width 6.88" (17 cm)
Maximum Height 10" (25 cm)

FLUID CAPACITY

Crankcase Oil See Engine Manual
Fuel 7 gallon (26.5 liters)
Hydraulic Fluid 10 gallon (37.8 liters)
Radiator 1.06 gallons (4 liters)

Grade of Hydraulic Fluid SAE 10W-40 API Service SJ or higher Motor Oil

OPTIONAL EQUIPMENT

15-618	Water Meter Kit	30-009	Manual Hose Reel
17-585	18' HD Super Boom	30-010	Electric Hose Reel
17-580	20' HD Super Boom	30-004	Foam Marker
30-006	Fresh Water Tank	15-835	Tank Rinse System
30-007	Chemical Cleanload Safe Fill	15-850	Sunshade Canopy
31-004	All Weather Top	14-515	Water Meter Kit (Gal)
17-590	Lazer-Beam Auto Boom for HD Booms	30-140	Electric Wash Tank

MAINTENANCE

Before servicing or making adjustments to machine, stop engine and remove key from ignition.

Use all procedures and parts prescribed by the manufacturer's. Read the engine manual before operation.

LUBRICATION

Use No. 2 General purpose lithium base grease and lubricate every 100 hours. The Spray Star 3180 has 7 grease fittings.

- A. One on the rod end of hydraulic cylinder.
- B. One on each the right and left spindles.
- C. One on the center front pivot.
- D. One on the idler arm.
- E. One on each of the pedal relays.

Use dielectric grease on all electrical connections.

AIR CLEANER ON ENGINE

Since the air cleaner on this engine is a dry type, never apply oil to it.

- 1. Open evacuator valve (see engine manual) once a week to remove large particles of dust and dirt.
- 2. Wipe the inside of the air cleaner with a cloth if it gets wet or dirty.
- 3. Avoid touching the element except when cleaning.
- 4. When dust adheres to the element, gently tap element on flat surface.
- 5. When carbon or oil adheres to the element clean according to engine manual.
- 6. Replace the element every year or every 6 months.
- 7. IMPORTANT Make sure wing bolt for the element is tight enough. If it is loose, dust and dirt may be sucked in, wearing down the cylinder liner and piston ring, resulting in poor power output.

Do not use petroleum solvents, e.g.., kerosene, which will cause cartridge to deteriorate. Do not use pressurized air to clean cartridge. Pressurized air can damage cartridge.

FUEL

CHECK EMISSION REGULATIONS OF YOUR AREA

With Emission control now in effect diesel fuel specification type and sulfur content % (ppm) used must be in compliant with all applicable emission regulations for the area in which the engine is operated.

Use of diesel fuel with sulfur content less than 0.10% (1000 ppm) is strongly recommended.

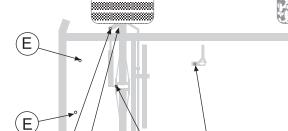

If high sulfur fuel is used, change oil and oil filters twice as often.

DO NOT USE Fuels that have sulfur content greater than 1.0% (10000 ppm).

Diesel fuels specified in EN 590 or ASTM D975 are recommended.

Since KUBOTA diesel engines of less than 56kW (75 hp) utilize EPA Tire 4 and Interim Tier 4 Standards, the use of low sulfur fuel or ultra low sulfur fuel is mandatory for these engines, when operated in US EPA regulated areas. Therefore, use No.2-D S500 or S15 diesel fuel as a alternative toe No. 2-D for ambient temperatures below -10°C (14° F).

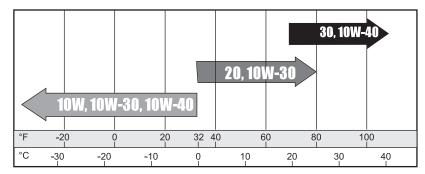

ENGINE OIL

With strict emission control regulations now in effect, the CF-4 and CG-4 engine oils have been developed for use with low sulfur fuels, for On-Highway vehicle engines. When Non-Road engines run on high sulfur fuel, it is advisable to use a "CF or better" classification engine oil with Total Base Number (a minimum TBN of 10 is recommended).

Check the engine oil before starting or more than 5 minutes
after stopping the engine. If oil level is low, remove oil filler
plug and add new oil to the prescribed level. Do not overfill.

O= Recommended	X= Not Rec	ommended	
Lubricating Oil Class	Fuel		
CF-4	0	Х	
CG-4	0	Х	

Engine oil should be MIL-L2104C or have properties of API Classifications CD grades or higher. Change the type of Engine oil according to the ambient temperature.

Starting Temperature Range Anticipated Before Next Oil Change

HYDRAULIC OIL

- 1. Use SAE 10W-40 API Service SJ or higher motor oil.
- 2. For proper warranty, change oil the first 50 hours and then every 500 hours or annually, which ever is first.
- 3. Oil level should be 2-2½" (5-6.4cm) from top of the tank when fluid is cold. Do not overfill.
- 4. After changing oil, run the machine for a few minutes. Check oil level and for leaks.
- 5. Always use extreme caution when filling hydraulic oil tank or checking level to keep system free of contaminants. Check and service more frequently when operating in extremely cold, hot or dusty conditions.
- 6. If the natural color of the fluid has become black or smells burnt, it is possible that an overheating problem exists.
- 7. If fluid becomes milky, water contamination may be a problem.
- 8. If either of the above conditions happen, change oil immediately after fluid is cool and find the cause. Take fluid level readings when the system is cold.
- 9. In extreme temperatures you can use straight weight oil. We recommend SAE 30W API Service SG when hot (above 90°F (33°C)) and SAE 10W API Service SJ or higher when cold (below 32°F (0°C) ambient temperature. Use either motor oil or hydraulic oil, but do not mix.
- 10. Oil being added to the system must be the same as what is already in the tank. Mark the tank fill area as to which type you put in.

TIRE PRESSURE

Caution must be used when inflating a low tire to recommended pressure. Over inflating can cause tires to explode. Front tires should be 20 psi (1.4bar) and rear tires should be 30 psi (2.0bar). Improper inflation will reduce tire life considerably.

MAINTENANCE

BATTERY

WARNING

Batteries normally produce explosive gases which can cause personal injury. Do not allow flames, sparks or any ignited object to come near the battery. When charging or working near battery, always shield your eyes and always provide proper ventilation.

Battery cable should be disconnected before using "Fast Charge".

Charge battery at 15 amps for 10 minutes or 7 amps for 30 minutes. Do not exceed the recommended charging rate. If electrolyte starts boiling over, decrease charging.

Always remove grounded (-) battery clamp first and replace it last. Avoid hazards by:

- 1. Filling batteries in well-ventilated areas.
- 2. Wear eye protection and rubber gloves.
- 3. Avoid breathing fumes when electrolyte is added.

Avoid spilling or dripping electrolyte.

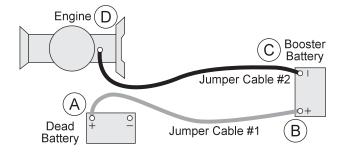

Battery Electrolyte is an acidic solution and should be handled with care. If electrolyte is splashed on any part of your body, flush all contact areas immediately with liberal amounts of water. Get medical attention immediately.

Use of booster battery and jumper cables. Particular care should be used when connecting a booster battery. Use proper polarity in order to prevent sparks.

TO JUMP START (NEGATIVE GROUNDED BATTERY):

- 1. Shield eyes.
- 2. Connect ends of one cable to positive (+) terminals of each battery, first (A) then (B).
- 3. Connect one end of other cable to negative (-) terminal of "good" battery (C).
- Connect other end of cable (D) to engine block on unit being started (NOT to negative (-) terminal of battery)

To prevent damage to other electrical components on unit being started, make certain that engine is at idle speed before disconnecting jumper cables.

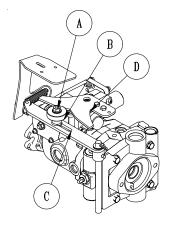

WHEEL CREEP

WHEEL CREEP

"Creep" is when the engine is running and hydrostatic transmission is in neutral, but due to inadequate alignment, wheels still move. Do the following procedure to stop this motion.

- 1. Lift up and support machine so rear wheels are off the ground and can turn freely.
- 2. In the engine compartment, the hydrostatic pump is on the right side. The shift arm (D) is on top of the pump The idler arm (B) has a bearing that rides in the vee of the shift arm. Loosen bolt (A).
- 3. With engine running, move bearing (B) so it centers on the shift arm (D) and 'wheel creep' stops.
- Tighten all fasteners and test by using foot pedal linkage to see that 'creep' is removed.

SPRAY PUMP WITH BELT

Located to the right of the engine. The belt should have approximately $\frac{1}{2}$ " (13mm) of deflection in the center of the top strand.

SAFETY INTERLOCK SWITCH

To adjust the interlock switch on the back hydrostatic pump loosen the set screw on the front half of the switch, with the ignition switch OFF. With a continuity tester connected across the switch, it should light with the shift arm centered. Move the shift arm to the right or left and the light should go off. By turning the back half of the switch clockwise it will reduce the amount of travel on the shift arm that is required for the light to remain on. The light must be on ONLY with the shift arm centered.

MASTER BOOM SWITCH (FOOT SWITCH)

The master boom switch, located on the left floorboard is used to override the master switch on the computer console of the spray systems. By pushing down it will turn on/off the booms. *For the 440 System* the Master Switch on the computer **must be off** for the master boom control switch to work.

GROUND SPEED CONTROL (FOOT SWITCH)

The ground speed control does not work the same as an automotive type cruise. The ground speed control is located on the center floorboard and is used to lock forward speed.

TO ENGAGE:

- 1. Flip rocker switch 'On' (green light).
- 2. Obtain desired speed with foot pedal.
- 3. Step on foot switch to lock speed.
- 4. Push foot switch again to disengage.

SPEED CALIBRATION NUMBERS

The speed calibration numbers for the Spray Star 3182 is 612.

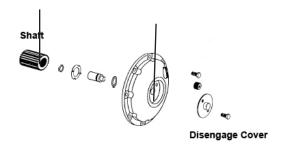

SPRAY BOSS CONTROL (ORANGE)

Engages and disengages speed boss. Forward is engage and all the way back is disengage. When the lever is engaged it sets a stop for the accelerator. The accelerator pedal must be used to maintain this speed. To adjust speed use the knob on the end of the lever, counter clockwise increases speed and clockwise decreases speed. Disengage the lever and you will have full accelerator pedal range.

BRAKE RELEASE

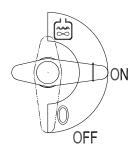

Run machine at half-throttle minimum, prior to operating traction pedal. This will ensure proper brake release.

To disengage the brake, assemble the disengage cover with the dimple center protruding inward. This will release the brake shaft. Re-assemble the disengage cover back to its original way.

TAN K AGITATION

The valve to turn on and off the tank agitation is located on the front of the seat panel, drivers right hand side. Turn valve handle down to turn on and turn back up to shut off.

SERVICE CHART

Before servicing or making adjustments to the machine, stop engine, block wheels and remove key from ignition.

Follow all procedures and ONLY use parts prescribed by the manufacturer. Read the engine manual before maintenance.

The suggested maintenance checklist is not offered as a replacement for the manufacturer's engine manual but as a supplement. You must adhere to the guidelines established by the manufacturer for warranty coverage. In adverse conditions such as dirt, mud or extreme temperatures, maintenance should be more frequent.

STORAGE

To prevent damage from freezing, pour window washer fluid into spray systems tank and operate pump to circulate mix through gun and hose back to tank. Open boom control to circulate through rest of spray system.

- 1. Clean the exterior surfaces of the engine.
- 2. Change the oil and filter while the engine is still warm from operation.
- 3. Drain coolant from the radiator. Open cock at the bottom of the radiator, and remove the pressure cap to drain water completely. Leave the cock open. Hang a not written "No Water" on the pressure cap. Since water freezes when temperature drops below 0°C (32° F) it is important that no water is left in the machine.
- 4. Remove battery from the engine, adjust the electrolyte level, and recharge it. Store battery in a dry dark place.
- 5. Store machine in a clean, dry place.

XTENDED STORAGE

- 1. Check for any damaged parts or missing decals. Replace as needed.
- 2. Drain crankcase completely and refill with recommended engine oil or equivalent.
- 3. Lubricate all grease points.
- 4. Check coolant protection and level.
- 5. Clean exterior surface of engine.
- 6. Seal all openings in engine and accessories with non-hygroscopic material. Mask off all areas to be used for electrical contact.
- 7. Tape all openings and make sure all surfaces are dry. Then spray all taped openings, all engine accessories including ignition wiring, and all exterior surfaces of engine with Insulation Compound.
- 8. Disconnect, remove and clean battery. Check electrolyte level. Charge the battery and store in a cool dry place (NOT directly on cement).
- 9. Put blocks or stands under the machine to take weight off tires.

AFTER STORAGE

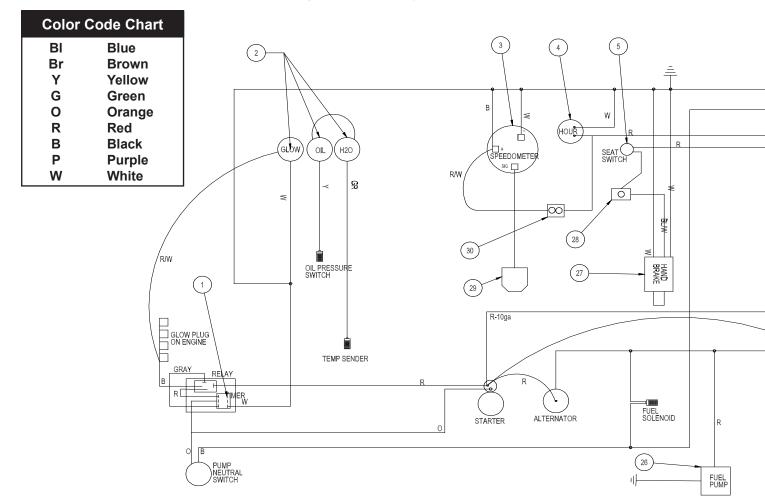

- 1. Check for any damaged parts or missing decals. Replace as needed.
- 2. Lubricate all grease points.
- 3. Clean exterior surface of engine.
- 4. Remove all tape and obstructions from exterior engine surfaces.
- 5. Charge and replace battery.
- 6. Check tire pressure.
- 7. Remove blocks or supports from under the machine.
- 8. Check engine oil level and coolant level and lubricate all grease points.
- 9. Fill fuel tank.
- 10. Check belt tension.
- 11. Run engine approximately 5 minutes before putting the engine under load.

16-524 MOTORIZED CONTROL VALVE DRAWING

WHEN SERVICING VALVE:

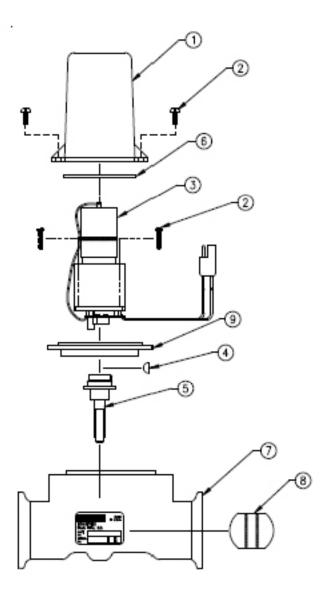

Replace valve body with ISO-Body Kit if valve has been leaking internally.

Replace motor assembly if the motor will not run.

Before reassembling valve, remove the coupler shaft from the valve body. Apply Loctite to coupler shaft and woodruff key. Place the coupler shaft (Ref 5) and the woodruff key (Ref 4) onto the motor shaft. Plug motor into the valve connector coming from Sprayer Control Console. Check that the motor rotates in both directions. Motor must stop when coupler shaft CAM releases printed circuit board button.

When reassembling valve, grease both sealing surfaces of coupler shaft. Insert coupler shaft into Iso-flange and be sure seal properly seats on shaft. Install motor on valve body and apply silicon sealant to mounting holes. Reassemble remaining items as shown in parts diagram.

	8901	Slide-On Connector	1
8	33-273	Auto Blade Type Fuse 30Amp	1

CONNECTION INSTRUCTIONS

Route wire harness along side of tank and over to fuse block taking care to stay clear of moving parts or hot engine components. Cut off excess wire and strip back $^3/_8$ ". Place one 8963 heat shrink ($^1/_4$ x 1 $^1/_4$) on each wire before crimping 8901 slide on connectors to the red and white wires. Connect the two wires to the fuse block first the red to the (+) positive and the white to the (-) negative. Put the 33-273 auto blade type fuse (30 and 1) into fuse block.

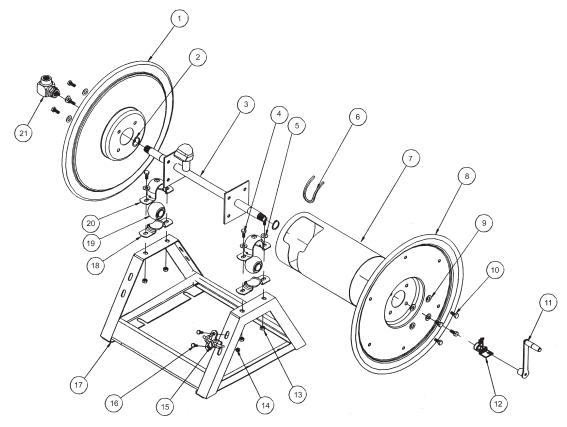

Make certain you are connecting positive (+) to positive; negative (-) to negative while attaching power leads. If you do not observe polarity, damage will result to electrical components.

Use Dielectric Grease On All Electrical Connections

6	30-110	Hose Reel Mount bracket (part of machine)	1
7	18-249	Barb Fitting	1
8	HB-516-18-175	Bolt, ${}^{5}/_{16}$ -18 x 1 ${}^{3}/_{4}$ (part of machine)	4
	HNFL-516-18	Flange Lock Nut, ⁵ / ₁₆ - 18 (part of machine)	4

- 1. Wear protective clothing when draining the tank and taking apart the lines.
- 2. Drain tank and spray system in a safe and approved method insuring that no chemical or water remain in tank as you will be taking apart lines.
- 3. Remove key from ignition, set park brake and block wheels.
- 4. Put hose reel on hose reel bracket with fitting to the rear of machine. Use four bolts $\frac{5}{16}$ 18 x $\frac{11}{2}$ and four $\frac{5}{16}$ 18 lock nuts to hold in place. Tighten bolts.
- 5. Put 18-249 barb fitting into hose reel side.
- 6. Place the 16-295 Hose Fitting into the Hose reel center.
- 7. Remove the blank cover from the ball valve by the manifold valve and place the 15-749 Hose Barb. Tighten clamp.
- 8. Route hose from the hose barb on the ball valve to the barb fitting on the side of the hose reel. Hold in place with the two 18-040 clamps.
- 9. Be sure all clamps and hardware are tight before using.

HOSE REEL ADJUSTMENTS

OPERATIONAL CHECK:

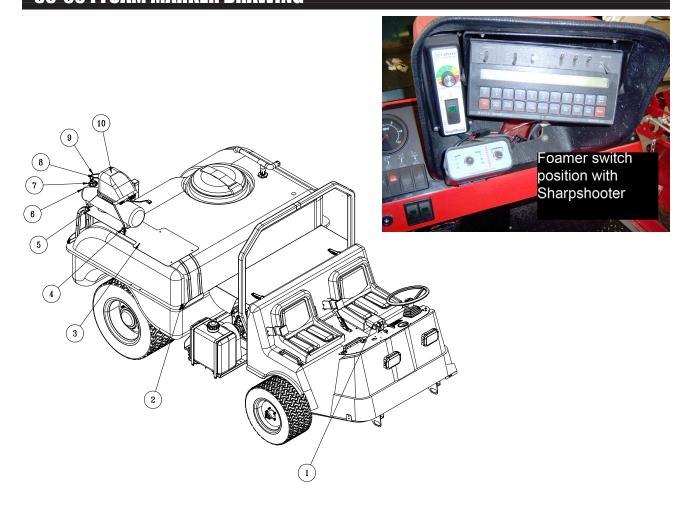

- 1. Pull hose off drum at least one full revolution. A clicking noise should be heard from locking mechanism.
- 2. Let the hose retract.
- 3. Pull the hose off until the first click is heard. Drum should lock when the hose tension is removed.
- 4. Continue pulling the hose, no more than one revolution, until no clicking is heard. Hose should rewind when tension is removed.

HOSE REPLACEMENT PROCEDURE:

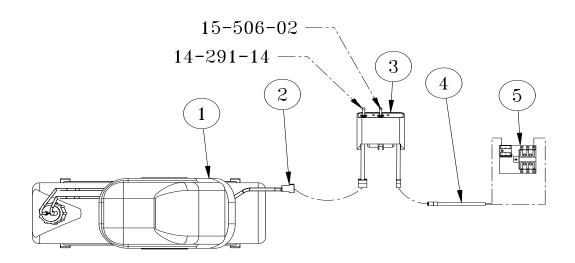

- 1. Facing swivel, turn the hose drum clockwise until all of the hose is removed from the drum and the drum is held by locking mechanism. Make sure spring is locked.
- 2. Remove hose clamps and disconnect hose from swivel. Remove old hose.
- 3. Insert new hose through roller guide, connect to swivel and reinstall hose clamps. Use spring guard over hose to protect the hose from being cut by the drum.
- 4. Remove check ball from old hose and install on replacement hose.
- 5. Carefully, keeping the tension on the hose, pull the hose to release the locking mechanism. Let the hose wind on the drum.

30-004 FOAM MARKER DRAWING

INSTALLATION INSTRUCTIONS

Safety: Before working on machine stop engine, set park brake, remove key from ignition and block wheels. Disconnect negative (-) battery terminal.

BOX MOUNT

Mount the switch box to the lower center of the dashboard. Remove the two phillips head bolts. Reinstall the #10 x 1 phillips head bolts and lockwashers to hold the switchbox onto the dashboard. Tighten all bolts.

WIRING

Use dielectric grease on all electrical connections. Connect power cable (15-509) to the switch box. Turn the switch off. Route the power wire down through the grommet in the dashboard. Follow the wire harness down under the floorboard, then back along the main frame and up to the fuse block in the engine compartment behind the passenger seat. The power cable will need to be cut and shortened. Attach slide-on terminals to the wire ends with heat shrink, then connect to fuse block. Red to positive(+), black to negative(-). Insert 10 AMP fuse into slot which has red wire attached to it.

Route Control Harness (15-504) from switch box on dashboard same as the power wire. Only continue all the way to the rear of the machine. Then pull the cable up over the back of the spray tank so it can be connected to the compressor.

CONNECTING THE CAP ASSEMBLY

Connect the blue tube to the tank cap connector which is also connected to the large blue tube which hangs below the cap. This is the soap outlet tube. Connect the clear tube to the other connector on the tank cap. This is the air input tube. Tighten connectors hand tight, assembly tank cap onto tank.

HOSES

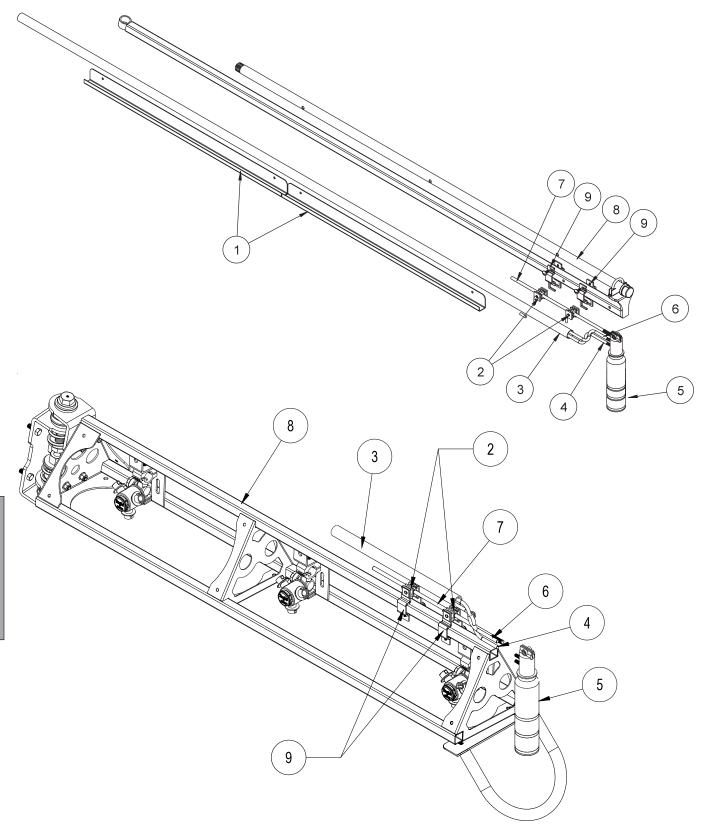

Being careful not to cut the tubing, cut the oversleeve back approximately 2" (5 cm) to expose blue and clear tubing. Remove blue wing nut from top connector of foam nozzle and slide it on the blue tube with the threads facing toward end of tube. Slide blue tube all the way over the top of the small tube on foam nozzle. Slide wing nut back to the threads and hand tighten. Follow the same steps for the clear tube and tube nut.

Route the tubing along underside of main frame using tie downs as necessary.

Install opposite ends of air-liquid tubes to compressor, again cutting back the oversleeve approximately 2" (5 cm) and inserting blue and clear tubes for the left boom section into the tubing connectors on the right side of compressor as far as possible. Follow the same steps for the right boom tubing. Notice the right boom is inserted into left side of compressor. To release tubing from compressor, hold black ring around tubing, and pull tube out.

FOAMER NOZZLE MOUNT & HOSE GUARD MOUNT DRAWING

30-162 FOAM MARKER PARTS LIST

REF#	PART#	DESCRIPTION	QUANTITY
1	15-537	Foamer Hose Guard 31"	4
	HSDPS-14-075	Stainless Steel Pan Head Drill Screw 1/4 x 3/4	8
2	16-987	Foam Nozzle Mounting Kit	1 per boom
3	15-507	Foamer Tubing	1
4		Clear Tubing	
5	15-511	Foam Nozzle	2
6		Blue Tubing	
7	15-510-01	Nozzle Mounting Rod	2
8		Boom	
9	16-795	Square Clamp	4

- 1. Slide hose clamp onto drop tube of foam nozzle and attach restrictor bell.
- 2. Place splined end of Nozzle mounting rod (Ref 7) into top of foam nozzle (Ref 5). Tighten screw.
- 3. Slide two foam nozzle mounts (Ref 2) onto the rod. Place square clamps (Ref 9) on foam nozzle mounts and mount the square clamps to the boom (Ref 8). Adjust foam nozzle mounts and clamps so nozzle assembly will clear end of boom. Tighten foam nozzle mounts and square clamps to prevent side to side movement. Do the same to the other side.
- 4. Being careful not to cut the tubing (Ref 3), cut the oversleeve back approximately 2" (5 cm) to expose blue (Ref 6) and clear tubing (Ref 4).
- 5. Remove blue wing nut from top connector of foam nozzle and slide it on the blue tube with the threads facing toward end of tube. Slide blue tube all the way over the top of the small tube on foam nozzle. Slide wing nut back to the threads and hand tighten. Follow the same steps for the clear tube and tube nut.
- 6. Route the tubing along underside of main frame using tie downs as necessary.
- 7. Install opposite ends of air-liquid tubes to compressor, again cutting back the oversleeve approximately 2" (5 cm) and inserting blue and clear tubes for the left boom section into the tubing connectors (Ref A) on the right side of compressor as far as possible.
- 8. Follow the same steps for the right boom tubing. Notice the right boom is inserted into left side of compressor. To release tubing from compressor, hold black ring around tubing, and pull tube out.
- 9. Hose's must be routed on bottom of the boom square tubing.
- 10. Mark 6 inches in from inside edge of foamer nozzle mounting bracket on square boom tubing.
- 11. Place hose guard (Ref 1) flush with top of square tubing with edge on previous mark. The channel covers hoses on the bottom of the square tubing.
- 12. Install hose guard using 2 drill screws (you may want to drill a 3/16 pilot hole first).
- 13. Place another hose guard against first and install in same manner.
- 14. Repeat process for other boom side.
- 15. Connect small plastic electrical plug under compressor to electrical extension cable.
- 16. For *Spray Star 1600* route extension cable under engine along the mainframe cross bar, using tie downs as necessary.
- 17. Cut cable and strip casing, allowing enough length to connect to fuse block.
- 18. Strip and connect slide on connectors to each wire and use the heat shrink.
- 19. Connect black negative (-) wire to the ground and connect red wire to the positive (+).
- 20. Insert 10 amp fuse into slot which red wire was attached to.

6	16-851	1" Nipple (comes with machine)	1
7	18-448	1" Ball Valve (Comes with machine)	1

- 1. Thoroughly flush the service line upstream of the meter to remove dirt and debris.
- 2. The DLJ Meter is for use **only** with **COLD WATER** up to 122°F (50°C)
- 3. Slowly open any upstream valves to prevent damage to the meter.

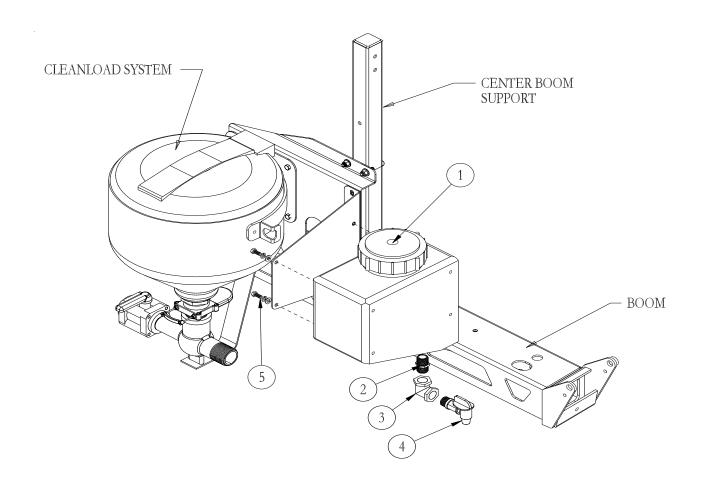

Gallons to Cubic feet Conversion:

Multiply gallons reading by 0.1337 to get cubic feet.

There are 7.48052 gallon per cubic foot.

30-006 FRESH WATER TANK DRAWING

30-006 FRESH WATER TANK PARTS LIST

REF#	PART#	DESCRIPTION	QUANTITY

2	16-158	Close Nipple	1
3	16-151	Elbow	1
4	16-960	Spigot	1
5	HB-516-18-075	Bolt ⁵ / ₁₆ - 18 x ³ / ₄	4
	HWL-516	Lockwasher ⁵ / ₁₆	4
	HW-516	Washer ⁵ / ₁₆	4

INSTALLATION INSTRUCTIONS

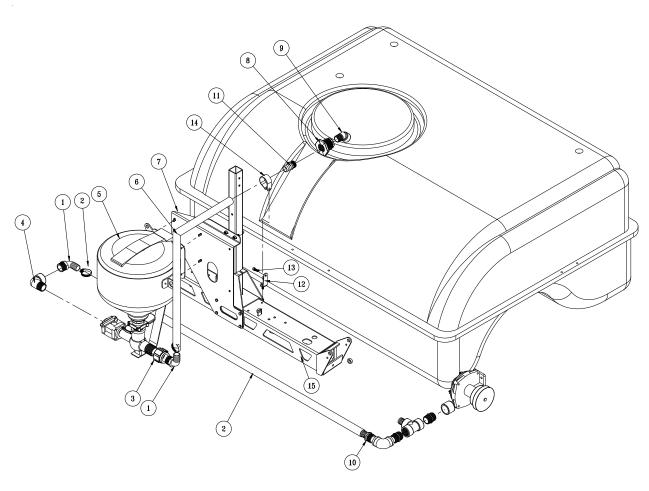

- 1. Fresh Water Wash Tank mounts on the rear of all the machines.
- 2. The Bracket is already attached to the SUper Boom center boom post.
- 3. Install the nipple (Ref 2), elbow (Ref 3) and spigot (Ref 4)into the bottom of wash tank (Ref 1). Use thread tape on all threads.
- 4. Mount the tank onto the mount bracket using four $^{5}/_{16}$ x $^{3}/_{4}$ bolts, washers and lockwashers. Tighten.
- 5. Rinse tank with clear water and check for leaks around fittings.

This tank is for fresh clear water ONLY. Do not put chemicals in this tank.

	HNFL-516-18	Flange Lock Nut ⁵ / ₁₆ - 18	2
14	HLC-A-200	Loom Clamp	1
15		Center Boom	

START-UP

- 1. All Cleanload valves must be closed prior to starting: inlet ball valve, knife valve and hopper rinse ball valve.
- 2. Open lid to check for foreign objects which may hinder performance or contaminate the system.
- 3. Close and lock lid by turning cover clockwise.
- 4. Divert pump flow to Cleanload inlet line. A pressure of 30 PSI minimum and 150 PSI maximum must be used. Highest pressures increase eduction rate and available wand suction.
- 5. Turn inlet ball valve on (yellow handle).
- 6. Open knife valve, located on the bottom of hopper, by pushing handle in (red handle).
- 7. Unlock and open lid slowly by turning cover counterclockwise.

LOADING LIQUID OR POWDERED CHEMICAL INTO HOPPER

- 8. Pour required amount of chemical into hopper. Avoid splashing liquids or powdered chemicals outside of hopper.
- 9. Rinse empty chemical containers if applicable. Place container opening over container rinse valve and press down. This will activate the rinse valve and rinse container.
- 10. Rinse Cleanload hopper. Close and lock lid by turning cover clockwise. Release the safety locking band on the hopper rinse ball valve and turn on for 20 seconds. Close ball valve and return locking band to locked position.
- 11. Open lid and inspect for chemical residue. Repeat step 10 as necessary.
- 12. Close knife valve by pulling red handle out towards you. Turn inlet (yellow handle) off.

LOADING LIQUID AND/OR POWDERED CHEMICAL WITH SUCTION LANCE

Note: Lance suction is dependent upon eductor pressure and flow. For best results, use highest pressure available up to 150 PSI maximum.

- 8. Insert lance body with o-ring into eductor until the o-ring is sealed.
- 9. Use the free end of the lance to pierce bag or container to vacuum powdered or liquid chemical.
- 10. Rinse lance. Place lance end into a clean container of water to rinse lance assembly.
- 11. Remove lance body from eductor and drain any remaining fluid into hopper.
- 12. Close knife valve (red handle). Turn inlet valve (yellow handle) off.

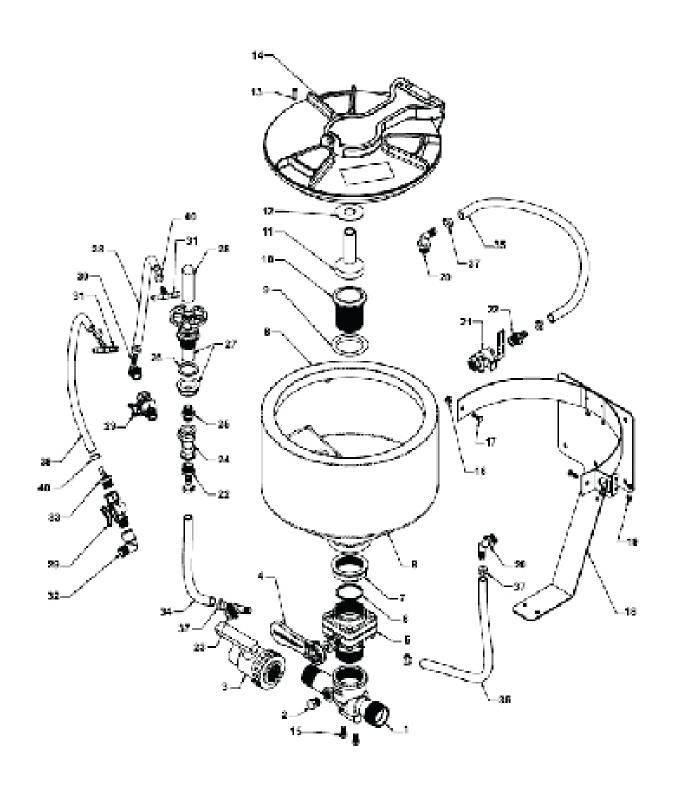

SHUTDOWN

- 1. Ensure that:
 - · All valves are closed. Be sure to close knife valve first. (Close by pulling red handle out towards you.)
 - · Chemical residue has been cleaned.
 - Hopper lid is closed and locked by turning cover clockwise.
- 2. Divert pump flow back to normal operation.

Sympton	Corrective Action	
Lo y-e du chon raie	Chack pump pleasure and low. Cleanbad Educior performance or based on Now and pleasure to the system. Note requirements for high educiron rates.
